

Here are the initial control settings for tune-up at 18.1 MHz:

Model	Bandswitch	Tune	Load
PA-76 (ALL)	21	25	75
PA-374A	21 MANUAL	25	75
PA-78	21 MANUAL	15	75
PA-77DX	12-18	195	55

The 10 MHz band has a 200 watt power limitation. Accordingly we recommend against using your ALPHA on this band.

The ALPHA PA-77, 77Dx/Sx, 78, 76, 76A, 374 and 374A should not be used on 12m.

The plate choke will overheat and burn on that band.
