1 ABOUT THIS MANUAL

In this manual the following signs and symbols are used:

The STOP sign indicates a warning that must be obeyed for safety reasons.

This sign indicates an important explanation or a specific advice which should be obeyed.

An additional information or explanation is indicated this way.

Copyright © 2016-2018 by Hilberling GmbH

2 IMPORTANT NOTES

Read and save this Operating Manual carefully before attempting to operate the device. This manual contains important safety and operating instructions to prevent damages caused by faulty operation.

2.1 General Precautions

WARNING HIGH VOLTAGE !

Do not touch antenna, antenna cable or antenna plugs and sockets during transmission. This may result in an electrical shock or burn of your skin by high-frequency.

WARNING !

The plug of the 230V power cord represents the designated separation device of the amplifier from the mains according to standard. The socket must be placed near the amplifier and easily accessible. The power cord must be able easily disconnected from mains.

CAUTION !

Make sure that no objects may penetrate into device or will touch connectors on rear panel of the power amplifier. This could cause electrical shock and severe injury.

PROTECT the amplifier from precipitation like rain or any liquid. Do not operate the power amplifier in excessively dusty or very humid environment.

PROTECT the amplifier from operation by any unauthorized person notably children.

AVOID placing and using the power amplifier in areas with temperatures below -15°C or above $+50^{\circ}\text{C}$. If the environment temperature drops so low that the dew point is undercut, avoid operating before the devices are dried completely.

AVOID placing the power amplifier against a wall. This may inhibit proper air circulation and could cause overheat. Do not cover any air inlets and outlets at front, bottom and rear panel of the device.

2.2 Notes on Placing

When selecting the place for operating the HPA-8000B bear in mind the general limitation concerning environmental conditions as outlined in the specifications and the cautions at the very beginning of this manual (see section 2.1).

Always handle the HPA-8000B with care – consider the weight of ca. 20 kg (ca. 50 lbs).

Please make sure proper air circulation. Do not cover any air inlets and outlets at front, bottom and rear panel of the device.

Choose the place of installation so that all connectors of the HPA-8000B are reachable at any time, this is especially true for the supply cable connector.

Select a power outlet that is capable to handle the power requirements. Connect your HPA-8000B to a proper ground system. In addition, observe the relevant technical electrical regulations and the local regulations of the power supplier. A good grounding system not only prevents electrical shock but also helps to ensure trouble free operation and will diminish television and broadcast interference (TVI/BCI).

For your convenience you might raise the front of HPA-8000B by unfolding and locking tilt bails mounted at the front equipment feet into front position as shown on Fig. 2-1.

If a large resistance will complicate the unfolding, please easily spread the bail for hurdle the locking nib to avoid damage of the equipment foot.

Fig. 2-1: Unfolding bails (front equipment feet)

3 SCOPE OF DELIVERY

Examine your HPA-8000B for signs of damage during shipping. Should any damage be apparent please take appropriate measures (contacting your carrier). We recommend to retain all packing material – it might be used for shipment of the power amplifier in the future. It is specially made for the HPA-8000B.

Listed below the hardware and all accessories delivered with your HPA-8000B. Make sure you have received and unpacked everything:

Tab. 3–1: Scope of Delivery

4 CONNECTORS ON REAR PANEL

This section introduces the connectors on the rear panel of the HPA-8000B.

4.1 Connectors and Controls

Fig. 4-1: Connectors and Controls on Rear Panel

Tab. 4-1: Connectors on Rear Panel

No	Label	Type	Description	
E		Threaded Bolt M6	Grounding connector for station ground	
FUSE	AC FUSE	Thermal Fuse 16 A time-lag	Thermal circuit breaker, 230 V AC, resettable	
J1	AUX TRX 1	DE-9 (D-Sub 9-pin)	Output / input signals for transceiver 1 (Wiring Tab. 4-2)	
J2	AUX TRX 2	DE-9 (D-Sub 9-pin)	Output / input signals for transceiver 2 (Wiring Tab. 4-2)	
J3	REMOTE TRX 1	DB-25 (D-Sub 25-pin)	Output / input signals for transceiver 1 (Wiring Tab. 4-2)	
J4	REMOTE TRX 2	DB-25 (D-Sub 25-pin)	Output / input signals for transceiver 2 (Wiring Tab. 4-2)	
J5	PTT TRX 1	RCA	HF PTT transceiver 1 +5 V / GND (GND = TX)	
J6	PTT TRX 2	RCA	HF PTT transceiver 2 +5 V / GND (GND = TX)	
J7	ALC TRX 1	RCA	ALC output transceiver 1; adjustable by P ₁₇	
J8	ALC TRX 2	RCA	ALC output transceiver 2; adjustable by P ₁₈	
J9	REMOTE PC	USB-B	Input / output data (USB Cable) 1. Interface to PC for HPA-8000B remote operation (CAT) 2. Interface to PC for update the software on HPA-8000B	
J10	VHF TRX 1	N	VHF input transceiver 1 only for TRX PT-8000A	50 / 70 MHz TRX PT-8000A only 'CAT Type' selection: 'Hilberling' (Sec. 5.4.2 and 7.2). *
J11	TRX 1	N	Input transceiver 1	1.8 ... 29.7 MHz TRX PT-8000A
				1.8 ... 29.7 / 50 / 70 MHz TRX by other manufacturer

Tab. 4–1: Connectors on Rear Panel (continued)

No.	Label	Type	Description	
J12	VHF TRX 2	N	VHF input transceiver 2 only for TRX PT-8000A	50 / 70 MHz TRX PT-8000A only 'CAT Type' selection: 'Hilberling' (Sec. 5.4.2 and 7.2). *
J13	TRX 2	N	Input transceiver 2	1.8 ... 29.7 MHz TRX PT-8000A 1.8 ... 29.7 / 50 / 70 MHz TRX by other manufacturer
J14	ANT. 4	N	HF output antenna 4	
J15	ANT. 3	N	HF output antenna 3	
J16	ANT. 2	N	HF output antenna 2	
J17	ANT. 1	N	HF output antenna 1	
J18	PREDISTORSION -60dBc ATT. PA OUT	SMA	HF Output, attenuated by 60 dB , e.g. for predistorsion on TRX	
P _{J7}	ALC adj. TRX 1	Trim Pot	Adjustment of ALC output on transceiver 1 within range 0 ... -10V at RCA J7 and D-Sub J1 Pin 6	
P _{J8}	ALC adj. TRX 2	Trim Pot	Adjustment of ALC output on transceiver 2 within range 0 ... -10V at RCA J8 and D-Sub J2 Pin 6	

* Inputs J10 and J12 are only usable for a connection to the Hilberling PT-8000A Transceiver. If so select option 'Hilberling' as a 'CAT Type' at the TRX Setup (see Section 5.4.2 and 7.2).

4.2 Pin Assignment J1 to J4 (D-Sub)

Tab. 4–2: Pin Assignment D-Sub

No.	Label	Figure	Pin Assignment	
J1	AUX TRX 1		1 HF-PTT TRX 1 +5V (GND=TX) 2 <not connected> 3 <not connected > 4 VHF-PTT TRX 1 +5V (GND=TX) 5 GND	6 ALC OUT (0 ... -10V)* 7 GND 8 <not connected > 9 TX INHIBIT (GND=TX)

J4	REMOTE TRX 2	as J3	Assignment analogous to J3	

* adjustable by P_{J7}

5 OPERATING AND DISPLAY ELEMENTS

Section 5.1 and 5.2 introduce operating and display elements at the front panel. Furthermore section 5.3 describes the softkey menus and screens for configuration, system information and software update.

5.1 Overview

Tab. 5–1: Operating and Display Elements

Element	Label	Description
ON⇌OFF Main Switch	POWER	When power on: <ul style="list-style-type: none"> All LEDs – including LEDs assembled to buttons – will light up for approx. 1 second (function test), LED AC / ON will light up permanently.
LED AC / ON	AC / ON	Lights up when device is powered on and supply voltage of 230 V AC is applied.
LED TX / PTT	TX / PTT	Lights up when the PA is activated (LED READY shine) and the HPA-8000B receives a PTT signal.
LED READY	READY	Lights up when the PA of HPA-8000B was activated by pushing button OPERATE. When the PA is not activated, transceiver HF signals will be sent without amplification to the currently switched antenna output connector.
TFT Display	÷	The TFT display shows the relevant operating parameters and at a time the current functions of the so-called ‘softkeys’ placed right hand side of the display as well.

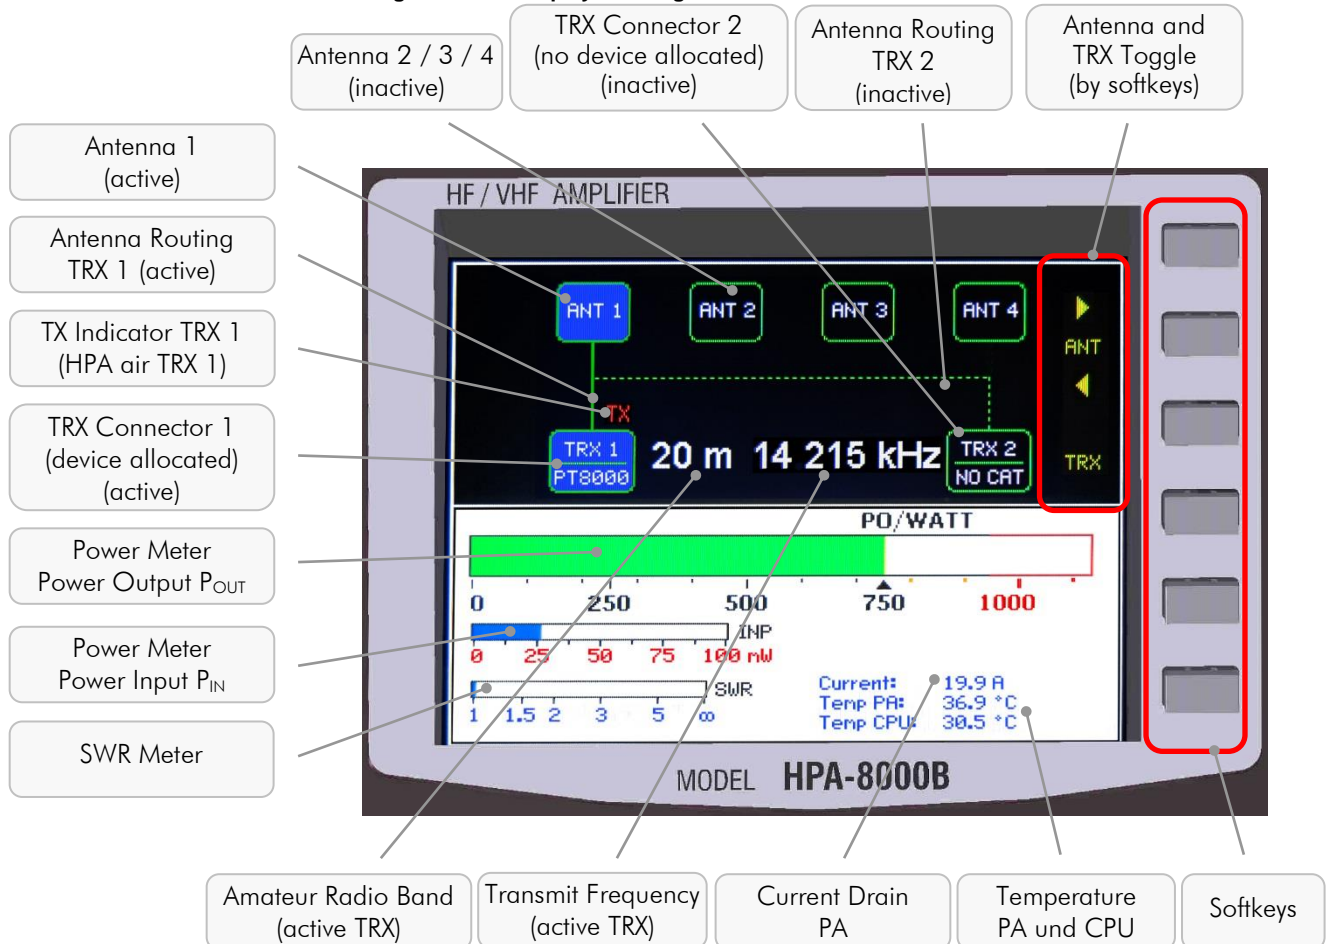

Fig. 5–1: Operating and Display Elements

5.2 TFT Display

In default view („default screen“) the TFT display gives a status overview about relevant operating parameters of the HPA-8000B. These include displaying the active transceiver with current band and transmission frequency, as well as the antenna which is allocated to the band, furthermore indication of power, SWR and temperature, as well as the antenna transceiver configuration of the inactive transceiver.

Fig. 5-2: TFT Display showing Default Screen

5.3 Softkeys on Default Screen

Right next to the display there are six buttons placed in vertical line as ‘Softkeys’ (buttons with changeable function) to operate the HPA-8000B. They allow to activate or select functions shown on display as a so-called ‘Softkey Menu’ at right border (see Sec. 5.4).

Exceptions to this rule – so softkeys without a menu – the following functions are existing:

- Toggle the antenna connector and the active transceiver is directly possible by using the upper three softkeys on default screen (Sec. 8.1).
- Manual tuning the center capacitances of the harmonic filter (CC-Tune) will be done directly by using the two lower softkeys on default screen (Sec. 8.5.3).

5.4 Softkey Menu

The six keys (so-called 'softkeys') right next to the display give access to the functions shown on the display as a so-called 'Softkey Menu' at right border (exceptions see Sec. 8.1 and 8.5.3).

When power on the HPA-8000B the softkey menu is removed. Pushing the button **MENU** in the cluster **FUNCTION** will show the softkey menu **MENU** (pushing again will remove the menu):

Fig. 5-3: Softkey Menu

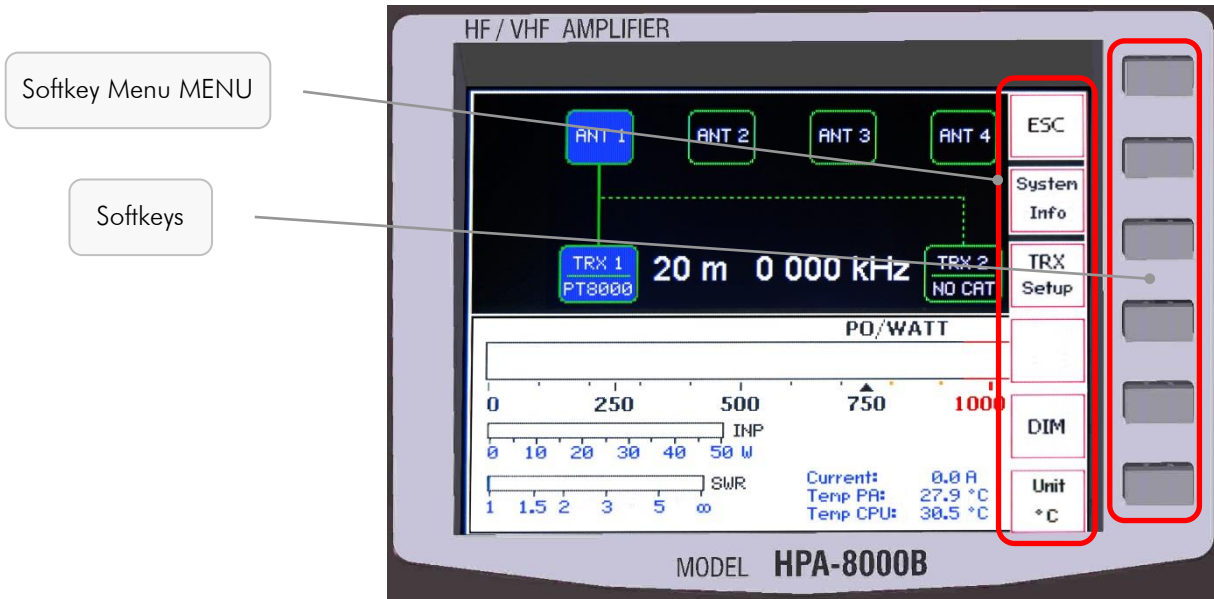

Fig. 5-4: Softkey Menu MENU

	Remove the softkey menu.
	Softkey menu and screen SYSTEM INFORMATION will be called up to show system information and operating parameters (Sec. 5.4.1).
	Softkey menu and screen TRX SETUP will be called up to show and edit device configuration (Sec. 5.4.2).
	Softkey menu DIM will be called up to adjust brightness of display (Sec. 5.4.3).
	Toggles the unit of the temperature indicators for PA and CPU between degree Celsius (°C) and degree Fahrenheit (°F).

If automatic or manual antenna tuning is activated (Sec. 8.4 u. 8.5) the softkey menu (MENU) cannot be called up.

5.4.1 Display of Device Status SYSTEM INFORMATION

Pushing softkey **SYSTEM Info** from softkey menu MENU (Fig. 5-4) will call up softkey menu and screen SYSTEM INFORMATION:

Fig. 5-5: Softkey Menu SYSTEM INFORMATION

Return to softkey menu MENU (Sec. 5.4) and default screen.

Softkey menu and screen SOFTWARE UPDATE will be called up to update the operation software (Sec. 5.4.1.1).

System information will be shown on display:

Fig. 5-6: Screen SYSTEM INFORMATION

Parameter	Value

5.4.1.1 Update Operating Software

Pushing softkey **SW Update** from softkey menu SYSTEM (Fig. 5-5) will call up softkey menu and screen SOFTWARE UPDATE:

Fig. 5-7: Softkey Menu SOFTWARE UPDATE

ESC	Return to softkey menu SYSTEM und screen SYSTEM INFORMATION (Sec. 5.4.1).
NO	Software update will not be executed. Return to softkey menu SYSTEM und screen SYSTEM INFORMATION (Sec. 5.4.1).
YES	Software update will be continued. A new screen will be shown on display (for details, see appendix A1-6).

All entries starting from row 4 will be removed and a security query will be shown instead:

Fig. 5-8: Screen SOFTWARE UPDATE

Software Version	• SW Version: V 01.11	ESC
Serial Number	• SN: 17030099	NO
Hardware Revision	• HW Rev: 1.20	
Security Query	• Do you really want to update the software?	
		YES

Select ESC or NO to end the update procedure.
Select YES to continue the update procedure, see appendix Sec. A1-6.

5.4.2 Device Configuration TRX SETUP

Pushing Softkey **TRX Setup** from softkey menu MENU (Fig. 5.4) will call up softkey menu and screen TRX SETUP:

Fig. 5-9: Softkey Menu TRX SETUP

	Return to softkey menu MENU (Sec. 5.4) and default screen.
	Toggles transceiver connector (TRX1 ↔ TRX2) whose settings shall be edited. When the menu will be called up the currently active TRX connector is the selected one (in row CAT Type the field of selected TRX will be shown inverse).
	Cyclic change of editable fields bottom-up. Non-editable fields (= no option available) will be skipped.
	Cyclic change of editable fields top down. Non-editable fields (= no option available) will be skipped.
	Cyclic change of manufacturer ('CAT Type'), TRX Model, Baud Rate and Input Power Range – depending on selected field and its available options – in listed order (see Table A2-16/A2-17 Appendix A2-6).
	Cyclic change of 'CAT Type', TRX Model, Baud Rate or Input Power Range – depending on selected field and its available options – in reverse listed order (see Table A2-16/A2-17 Appendix A2-6).

On screen a table will be shown to adjust interface parameters and input power range for each of both transceiver connectors.

Push softkeys and for line break, push softkeys and to select respective parameters (see Tab. A2-16/A2-17 Appendix Sec. A2.6). See also section 7.2 and 7.3.

5.4.3 Brightness of Display DIM

Pushing softkey **DIM** from softkey menu MENU (Fig. 5.4) will call up the menu DIM to vary the brightness of the display:

Fig. 5–11: Softkey Menu DIM

Display brightness is adjustable in ten steps.

6 INSTALLATION / INITIAL OPERATION

Prior to any operation please read this manual carefully.

The HPA-8000B is unlocked by software according to the band plans of that IARU region the device is delivered (Tab A2–2 and A2–3).
The IARU region can be changed by software update.

Prior applying main power to the HPA-8000B and power-on please verify the remarks in the following section 6.1.

6.1 Cable Connections

Please check at rear panel of HPA-8000B (Fig. 4–1):

- Grounding stud (E) is connected to station ground,
- HF cables from HPA-8000B (J11 TRX1 / J13 TRX 2) to transceiver(s) (PT-8000A: J2 HF-ANT1 / J3 HF-ANT 2) are installed properly,
- Only in case a PT-8000A is being connected:
VHF cable from HPA-8000B (J10 VHF TRX 1 / J12 VHF TRX 2) to PT-8000A (J1 VHF-ANT) is installed properly,
- Antenna(s) (J14 ANT 4 ... J17 ANT 1) is/are connected properly,
- Data cable from HPA-8000B (J1 AUX TRX 1 / J2 AUX TRX 2; alternatively: J5 PTT TRX 1 / J6 PTT TRX 2 und J7 ALC TRX 1 /J8 ALC TRX 2) to transceiver/s (PT-8000A: J17 AUX-TX) is/are installed,
- Data cable from HPA-8000B (J3 REMOTE TRX 1 / J4 REMOTE TRX 2) to transceiver/s (PT-8000A: J21 TRANSVERTER) is/are installed.

6.2 Power-on

When all of the connections have been made and checked (6.1) put the HPA-8000B into operation as follows:

- Ensure that the main switch (POWER) of the HPA-8000B is switched off (pushed down),
- Connect the supply cable to main power socket, (200 ... 260 V AC / 50 ... 60 Hz);
- Switch on POWER at HPA-8000B main switch.

All LEDs will light up for approximately one second (function test).
LED AC/ON will light up permanently.

On the display the default screen will be shown (Fig. 5–2).

7 TRANSCEIVER SET UP

As described in section 7 and 8, prior first operation of the HPA-8000B basic settings are needed to undertake.

7.1 Select Transceiver Connector

When powered-on the first time, connector TRX 1 (J11/J10) is selected by default (= "active") and therefore shown with a blue background.

Fig. 7-1: Transceiver Connector TRX 1 active / inactive

If necessary the transceiver connector will be switched as follows:

1. If a softkey menu is shown on display:
Pushing button **MENU** in the cluster **FUNCTION** will remove the current softkey menu.
2. Pushing softkey **TRX** (default screen) toggles connectors TRX 1 and TRX 2. When active, the TRX indicator will be shown with a blue background (Fig. 7-1).

7.2 Allocate Transceiver Model

As a factory setting TRX model PT-8000A is allocated to both TRX connectors TRX 1 and TRX 2 (the display will show 'PT8000').

Fig. 7-2: Transceiver Connector TRX 1 active / inactive, PT-8000A allocated

Due to the allocation the default parameters of CAT mode (Band Data, Band Voltage, RS232) of the selected transceiver will be switched at HPA-8000Bs D-Sub connectors REMOTE J3 / J4.

The allocation is made by browsing manufacturer and model list provided by operation software (see Tab. A2-16 Appendix).

A transceiver model will be allocated as follows:

1. If no softkey menu is shown on display:
Pushing button **MENU** in the cluster **FUNCTION** will show softkey menu **MENU** (Fig. 5-4).

2. Pushing softkey **TRX Setup** will call up softkey menu and screen TRX Setup (Fig. 5-9 and 5-10).
In case TRX 1 is currently the active TRX connector, the first field in column TRX1 of the table (row CAT Type, see Fig. 7-3) is shown with a blue background. Subsequent adjustments by arrow softkeys (4. ... 6.) will have an effect to this connector.

Fig. 7-3: Setup Transceiver Connector TRX1

- IF adjustments are to do for the other connector, pushing softkey **TRX** will toggle the connectors. Therefore the first field in the other column will be shown with a blue background:

Fig. 7-4: Setup Transceiver Connector TRX2

- Push softkey **▶** (possibly **◀**) to select a manufacturer from CAT Type list. In case the desired manufacturer is not listed examine the possibility of an RS232 linkage to the connected transceiver (choose option RS232). If linkage is not possible (REMOTE LED does not light up), choose option NO CAT. Exit screen and softkey menu by pushing softkey **ESC**.

- Push softkey **↓** to select the next row which provides choice. If more than one option is selectable in row TRX Model it is the field in this row (the field is shown with a blue background).

Push softkey **▶** (possibly **◀**) to select an option from list (TRX Model or transmission mode CI-V / Band Voltage / CAT 1-2 / Band Data).

- Push softkey **↓** to select the next row which provides choice. If there is more than one baud rate selectable it is the field in this row (the field is shown with a blue background).

Push softkey **▶** (possibly **◀**) to select a baud rate supported by the shown TRX Model.

- When all settings has been carried out exit screen and softkey menu by pushing softkey **ESC**.

In case a manufacturer (or option NO CAT , see row CAT Type, Point 4.) is selected and whether in row TRX Model nor in row Baud Rate an option is selectable, pushing softkey **↓** will directly switch to row Input Power (see Section 7.3).

When the selected and connected transceiver is powered-on, both devices will set up a communication link.

If the connection is completed successfully, the LED in button **REMOTE** will light up. The HPA-8000B will now take over the data for band selection and current frequency through CAT remote control from the connected transceiver.

When HPA-8000B is set to REMOTE operation the band selection buttons are locked.

7.3 Input Power Adjustment

The range of input power of the HPA-8000B is set to the range of 0 ... 50 Watt for both transceiver connectors by default. Alternatively, there are two more ranges 0 ... 100 milliwatt and 0 ... 5 watt available. To change the ranges proceed as follows:

1. Push Button **MENU** in the cluster FUNCTION to show the softkey menu MENU (Fig. 5-4) if not shown yet.

2. Push softkey **TRX Setup** to call up softkey menu and screen TRX Setup (Fig. 5-9 and 5-10).
Ist TRX 1 der zurzeit aktive TRX-Anschluss, ist in der Spalte TRX1 der Tabelle das erste Feld (Zeile CAT Type) blau unterlegt, siehe Abb. 7-3.
Nachfolgende Einstellungen mit den Pfeiltasten erfolgen für diesen Anschluss.

3. Push softkey **TRX** to switch to the other connector if necessary, see Fig. 7-4.

4. Push softkey **↑** once (or: push softkey **↓** up to three times – depending on possible setting options), so that the field in row Input Power will be shown with a blue background (Abb. 7-5).

Fig. 7-5: Setup Input Power 50 Watt - 'High'

Baud Rate:	9600	9600	↓
Input Power:	50 Watt	50 Watt	↑

5. Push softkey **▶** (or **◀**) to select one of the three possible input power ranges.

Fig. 7-6: Setup Input Power 100 Milliwatt - 'mW'

Baud Rate:	9600	9600	↓
Input Power:	100 Milliwatt	50 Watt	▶

Fig. 7-7: Setup Input Power 5 Watt - 'Low'

Baud Rate:	9600	9600	↓
Input Power:	5 Watt	50 Watt	▶

6. When all settings has been carried out exit screen and softkey menu by pushing softkey **ESC**.

On default screen the power meter which is showing input power P_{IN} will be adjusted accordingly:

Fig. 7-8: Input Power Meter 'High'

Fig. 7-9: Input Power Meter 'mW'

Fig. 7-10: Input Power Meter 'Low'

Changing the input power ranges of both transceiver connectors TRX 1 and TRX 2 will be stored permanently and without confirmation.

8 ANTENNA SETUP

Prior first operation it is also necessary to verify or change the allocation of amateur radio bands to the used antenna connectors (see Sec. 8.1).

Before transmit operation starts with high power it is expedient to carry out tuning the HPA-8000B to the connected and allocated antennas in that frequency ranges the radio operation is scheduled (see Sec. 8.4 and 8.5).

8.1 Antenna Allocation to Bands

One of the four antenna connectors can be allocated to each amateur radio band supported by HPA-8000B (s. Appendix A2.2). There is a particular allocation for each transceiver connector TRX 1 and TRX 2.

After initial power on antenna connector ANT 1 is allocated to all bands for both transceiver connectors.

Allocation takes place for the current active transceiver connector at a time:

1. Pushing softkey **TRX** (on default screen – without menu) to select that transceiver connector (= switching active, TRX 1 / TRX 2), for which the allocation of a band to a antenna connector is to be carried out. When active, the indication is shown by a blue background.

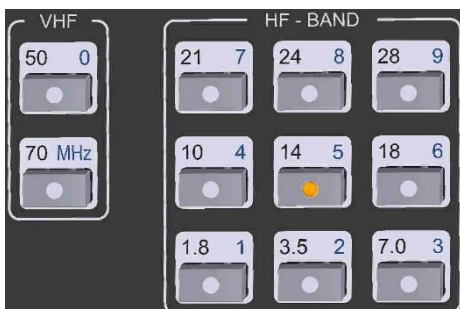

Fig. 8-1: Antenna Allocation – Toggle the active Transceiver

When automatic or manual antenna tuning is activated (Sec. 8.4 u. 8.5), changing of the transceiver connector is not possible (active/inactive).

2. When the allocated transceiver (Sec.7.2) is connected to the HPA-8000B and powered on, and the communication link is set up properly so that LED REMOTE lights up at HPA-8000B, the band will be selected at the allocated transceiver. The LED of the appropriate band button of the HPA-8000B lights up. → Continue with point 4.

3. If a communication link to the allocated transceiver could not be setup (LED REMOTE is off), the option NO CAT must be selected as a CAT Type. Only with this configuration the band selection can be done locally on HPA-8000B (clusters HF-Band and VHF; the LED on selected band button lights up) and the amplifier can be operated. Otherwise it will remain in bypass mode.

When triggering PTT on the transceiver the current frequency will be detected by an internal frequency counter and will be shown on display. If this frequency does not match to the manually selected band this will be switched over to the corresponding band.

Band selection directly on HPA-8000B is only possible if CAT type NO CAT is selected (see Sec. 7.2 →4.).

- Select antenna connector by using softkeys **ANT ▶** and **ANT ◀**.

Fig. 8-2: Antenna Allocation – Change of Antenna Connector

The graphical depiction of the antenna allocation varies accordingly:

Fig. 8-3: Antenna Allocation – Factory Setting

Fig. 8-4: Antenna Allocation – Variation Example

The antenna allocation will be stored permanently and without confirmation.

For the non-active (as well as for the active) transceiver is true:
Assumed the communication link to the HPA-8000B is set properly the change of the used antenna connector caused by a band switch will be depicted on the display (non-active TRX = dotted line).

When automatic or manual antenna tuning is activated (Sec. 8.4 u. 8.5), changing of the antenna connector is not possible.

8.2 Antenna and Antenna Tuner – basic Considerations

Standing wave ratio (SWR) may increase significantly when using an antenna outside of the specific frequency range for which it is tuned. The power amplifier will operate at peak performance only when its load is resistive – i.e. the SWR is close to 1.0.

The HPA-8000B is equipped with an automatic antenna tuner (ATU) which does not actually tune the antenna. The ATU instead matches the feed line to the final amplifiers so they always “see” a SWR close to 1.0.

The ATU has its limits – tuning mismatches with SWR greater than 3.0 become difficult and will exceed the capabilities of the ATU. Using a tuned or resonant antenna with 50 Ohm impedance at the feed point for the specific frequencies is highly recommended. The purpose of the ATU is to ensure that a resonant antenna can be used at the limits of the band selected with optimum performance of both HPA-8000B and antenna system.

Never try to hook up a symmetrical open feeder line (balanced, twin-lead, ladder line etc.) directly to the HPA-8000B. Instead use 50 Ohm coaxial feeders only. The connectors supplied on the HPA-8000B are all Type N.

With the ATU it is acceptable to use a broadband antenna system like a log periodic or T2FD system which trade wide bandwidth for an SWR ranging as high as 3.0.

8.3 Antenna Tuner

The HPA-8000B is equipped with an antenna tuner, which allows automatic tuning (button **START**) as well as manual tuning (button **MANUAL**) on the HF amateur radio bands within range 1.8 to 29.7 MHz.

Each band is divided into subbands. For each of these subbands and for each of the four antenna connectors a separate filter setting. The number of subbands varies from Band to Band (s. Sec. A2.3 Appendix).

It is recommended to tune first automatically (see Sec. 8.4) and possibly carry out subsequently a manual „fine tuning“ (Sec. 8.5).

Both for tuning as well as for using the tuner settings when transmitting the band and frequency data of the connected transceiver will be needed.

When the allocated Transceiver (Sec.7.2) is connected to the HPA-8000B and powered on, and the communication link is set up properly so that LED REMOTE lights up at HPA-8000B, the band and frequency data sent by the transceiver will be shown on the display and the LED of the appropriate band button will light up.

In case a transceiver is connected without data communication link (NO CAT must be selected as a CAT Type), the current frequency will be detected by an internal frequency counter when triggering PTT on the transceiver.

In this configuration LED REMOTE will remain off. Frequency and respected band data will be shown on display and the LED on the corresponding band button will light up.

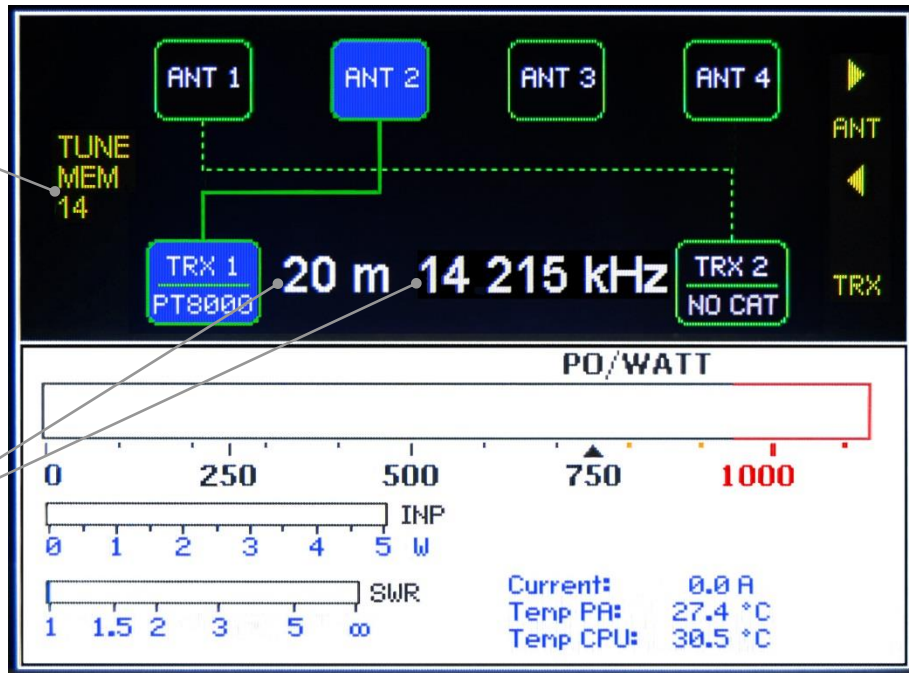

Pushing button **TUNER** in the cluster AUTO – TUNER will switch on the antenna tuner (pushing again will switch off), the following will be shown:

- The subband memory position corresponding to the current transceiver frequency will be shown on display („TUNE MEM XY“; Tables of subbands see Section A2.3 Appendix).
The color of the displayed subband varies:
Yellow Letters: This subband was not tuned yet (= non-tuned harmonic filter is active).
Green Letters: This subband has been tuned (= settings of an earlier tuning are active).
- The LED of button **TUNER** will light up.

Fig. 8-5: Antenna Tuner activated – Showing Frequency Information

Subband Memory Position
yellow (not tuned) or green (tuned)

Band and Frequency Information by Transceiver

As mentioned at the beginning of this section, a frequency information is always needed for tuning. This information can be communicated by:

- Data connection from/to transceiver (CAT link via D-Sub connection at J3 / J4);
- CW signal from Transceiver (Evaluation of the HF signals at J10 ... J13 by internal frequency counter);
- Data connection from/to PC (CAT remote control via USB connection J9).

In case no frequency information is available at HPA-8000B (no data communication link to the transceiver; an evaluable HF signal has not received yet), the display of „TUNE MEM“ will take place without designation of subband memory position. In this case the standard values of the harmonic filter for this band defined by hardware will be preselected (when OPERATE off) or switched (when OPERATE on).

Fig. 8-6: Antenna Tuner activated – no Frequency Information

Subband Memory Position and TRX Frequency not displayed (Band Selection at HPA-8000B)

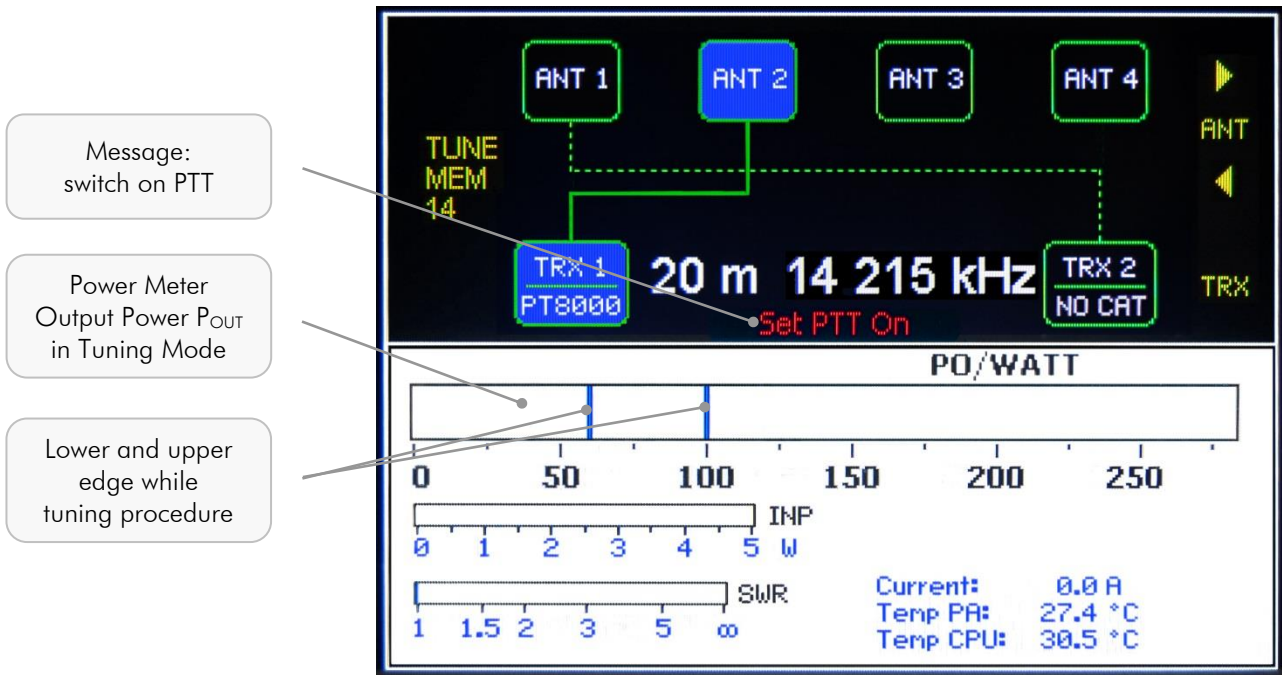

8.4 Automatic Antenna Tuning

The automatic tuning proceeds as follows:

1. As described in section 7.2 the transceiver is powered on (receive mode), band and frequency are selected at the transceiver and are recognized and displayed by the HPA-8000B (remote mode; LED REMOTE shines); the tuner of the HPA-8000B is activated (Sec. 8.3).
2. Preselect output power of the transceiver to a minimum (do not transmit yet = PTT off).
3. Switch final PA of the HPA-8000B active (button **OPERATE** in the cluster FUNCTION, see Sec. 9).
4. Pushing button **START** in the cluster AUTO – TUNER will select the automatic tuning mode (pushing again will deselected the tuning mode):
 - The power meter for output power P_{OUT} changes to tuning mode (250 Watt scale). Two lines (lower edge at 60 watt out and upper edge at 100 watt out) mark the range of power within which it is possible to tune the filters.
 - A message will be shown to set the transceiver to transmit mode („Set PTT On“).
 - The LED of button **START** will light up.

Fig. 8-7: Auto-Tuning activated „Set PTT On“

5. Select CW mode at the transceiver and activate PTT by minimum of power permanently (e.g. Hilberling PT-8000A: button **TX/ON**).

- It is recommended to start with a minimum of transceiver output power. When output power of the HPA-8000B exceeds 250 watt the tuning process will abort and the automatic tuning mode will be deselected (button LED off).
- Automatic tuning cannot be selected as long as the final PA is not activated (OPERATE on).

In case there is shown a softkey menu or another screen than default screen they will be hidden.

6. Increase transceiver output power slowly.
As long as the output power of the HPA-8000B stays below the lower tuning edge, the message „Tuning Signal low“ will be shown.
If so further increase transceiver power.

Fig. 8-8: Auto Tuning – Input Power too low „Tuning Signal low“

7. In case transceiver power is too high, and therefore the output power of the HPA-8000B is higher than upper tuning edge still before the tuning procedure has been started, the message „Tuning Signal high“ will be shown.
If so decrease transceiver power.

Fig. 8-9: Auto Tuning – Input Power too high „Tuning Signal high“

8. In case the output power of the HPA-8000B is within tuning range, the tuning process will start automatically and the message „Tuning“ will be shown.
On the filter board the relays will be switched audible.

Fig. 8-10: Auto Tuning – Input Power ok „Tuning“

9. When the tuning process will be completed after a few seconds, the message „Tuning done – set PTT off“ will be shown.
Now deactivate PTT at the transceiver.

Fig. 8-11: Auto Tuning finished „Tuning done“

10. The LED on button **START** goes off and – if this subband was tuned the first time – the indicator TUNE MEM will change its color from yellow to green.
The new filter settings will be stored permanently and without confirmation.

8.4.1 Error Messages when Tuning Process was aborted

In case transceiver power is too high, and therefore the output power of the HPA-8000B is higher than upper tuning edge after the tuning procedure has been started, or a failure occurs in this phase, the tuning procedure will abort with the message „Tuning Abort – Set PTT off“.

If so deactivate PTT and start the automatic tuning again.

Fig. 8-12: Auto-Tuning aborted „Tuning abort“

This message will also be shown when the automatic tuning procedure was aborted by operator when pushing button **START**.

In this case the last memorized values are valid or (if no tuning was done before) the values of the un-tuned harmonic filter.

Once the automatic tuning process has been started, a few more events can cause an abort with one of the following error messages:

When the input power of the HPA-8000B fluctuates too strongly while tuning, so that tuning of the harmonic filter is no more possible, the procedure will abort with message „INPUT UNSTABLE“:

Fig. 8-13: Auto Tuning – Input Power unstable „Input unstable“

In case the output power of the HPA-8000B exceeds 250 watt while tuning, the procedure will abort with message „OUTPUT OVERLOAD“:

Fig. 8-14: Auto Tuning – Output Power too high „Output Overload“

- During the tuning process the TRX PTT signal must be activated permanently and the output power of the HPA-8000B must be between 60 and 100 watt.
- As long as the LED in the button **START** shines (automatic tuning is activated), softkey menu (MENU) cannot be called up.

8.5 Manual Antenna Tuning

The manual antenna tuning is done in the following steps:

1. As described in section 7.2 the transceiver is powered on (receive mode), band and frequency are selected at the transceiver and are recognized and displayed by the HPA-8000B (remote mode; LED REMOTE shines); the tuner of the HPA-8000B is activated (Sec. 8.3).
2. Preselect output power of the transceiver to a minimum (do not transmit yet = PTT off).
3. Switch final PA of the HPA-8000B active (button **OPERATE** in the cluster FUNCTION, see Sec. 9).
4. Pushing button **MANUAL** in the cluster AUTO – TUNER will select the manual tuning mode (pushing again will deselected the tuning mode):
 - The power meter for output power P_{OUT} changes to tuning mode (250 Watt scale). Two lines (lower edge at 60 watt out and upper edge at 100 watt out) mark the range of power within which it is possible to tune the filters.
 - Right below to output power meter – above displayed current and temperature values – currently switched values of the harmonic filter (L_{out} , C_{out} and CC) will be shown for the present subband.
 - Below, near right edge of the display, the softkey functions for setting the center capacitance (= CC) of the harmonic filter will be shown.
 - A message will be shown to set the transceiver to TRX mode („Set PTT On“).
 - The LED of button **MANUAL** will light up.

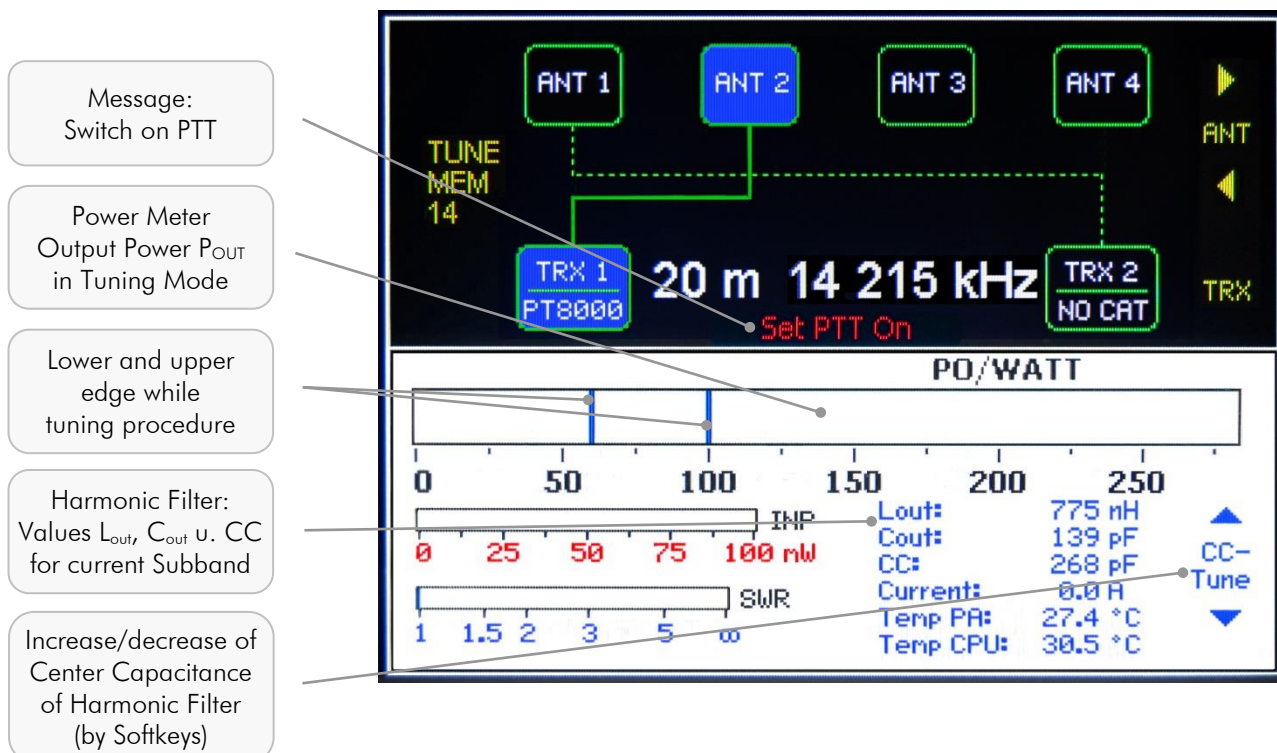

Fig. 8–15: Manual Tuning activated „Set PTT On“

5. Set the transceiver to CW mode and permanently activate PTT with a minimum of power (e.g. Hilberling PT-8000A: button **TX/ON**).

- It is recommended to start with a minimum of transceiver output power. If HPA-8000Bs output power will exceed 250 watt the tuning procedure will be aborted and the tuning mode will be deselected (button LED off).
- Manual tuning cannot be selected as long as the final PA is not activated (OPERATE on).

In case there is shown a softkey menu or another screen than default screen they will be hidden.

6. Increase transceiver output power slowly. As long as the output power of HPA-8000B stays below the lower tuning edge, the message „Tuning Signal low“ will be shown. If so further increase transceiver power.

Fig. 8-16: Manual Tuning – Input Power too low „Tuning Signal low“

7. In case transceiver power it too high, and therefore the output power of HPA-8000B is higher than upper tuning edge, the message „Tuning Signal high“ will be shown. If so decrease transceiver power.

Fig. 8-17: Manual Tuning – Input Power too high „Tuning Signal high“

8. When output power of HPA-8000B is within tuning range, the message „Please Tune“ will be shown.

Fig. 8-18: Manual Tuning – Input Power ok „Please Tune“

Using buttons and located in the clusters „L – TUNE“ and „C – TUNE“ and using softkeys and the filter values of current subband now can be adjusted (see next page).

8.5.1 Manual L Tuning

Using buttons  and  in the cluster „L – TUNE“ the inductance on output side of harmonic filter will be adjusted (labeled on display as L_{OUT}).

-  Decreases output inductance of harmonic filter.
-  Increases output inductance of harmonic filter.

Increment 25 nH / 255 steps (values see Tab. A2-14 Appendix).

8.5.2 Manual C Tuning

Using buttons  and  in the cluster „C – TUNE“ the capacitance on output side of harmonic filter will be adjusted (labeled on display as C_{OUT}).

-  Decreases output capacitance of harmonic filter.
-  Increases output capacitance of harmonic filter.

Increment 5 pF (approximated) / 255 steps (values see Tab. A2-14 Appendix)

8.5.3 Manual CC Tuning

Using softkeys  and  the center capacitance of harmonic filter will be adjusted (labeled on display as CC).

Fig. 8-19: Manual Tuning – Center Capacitance CC

Increase center capacitance of harmonic filter.

Decrease center capacitance of harmonic filter.

Increment 10 pF (approximated) / 255 steps (Values see Tab. A2-14 Appendix)

- Manual tuning will be finished by deactivating the PTT on connected transceiver or by pushing button . In the latter case the message „Tuning done – Set PTT off“ (Fig. 8-11) will be shown on display to remind the deactivation of PTT on transceiver.

- The LED on button  goes off and – if this subband was tuned the first time – the indicator TUNE MEM will change its color from yellow to green.

The new filter settings will be stored permanently and without any confirmation.

- During the tuning process the TRX PTT signal must be activated permanently and the output power of the HPA-8000B must be between 60 und 100 watt.
- As long as the LED on button  shines (manual tuning is activated), softkey menu (MENU) cannot be called up.

9 INTERNAL FINAL PA OPERATE

When power on the HPA-8000B the final power amplifier is set to bypass mode, i.e. it is switched inactive, correspondingly LED READY does not shine.

The complete control of the filter board is deactivated as well. When band change occurs – whether local controlled or remote controlled by connected transceiver via communication link – the filters will not switched.

Pushing button **OPERATE** in the cluster FUNCTION will activate the final power amplifier (pushing again will put it back into the bypass mode):

- Filter board control will be activated.
- When the PA receives a PTT signal from connected and activated transceiver, incoming HF signals will be amplified and sent according to current antenna routing to the active antenna connector.
- LED READY will light up.

- The PA only can be activated when the PTT signal of the connected transceiver is switched off.
- The PA must be activated hence the automatic or manual tuning mode can be selected.
- The PA cannot be deactivated as long as automatic or manual tuning mode is selected.

9.1 Error Messages when Final PA was deactivated.

Once an overload inside final amplifier occurs while operating HPA-8000B, the internal PTT will be switched off and an appropriated error message will be shown on display for 1 to 2 seconds. To reset the HPA-8000B deactivate PTT signal on transceiver.

In case input power is too high and the final amplifier is switched off by software (details Tab. A2-15 Appendix), message „INPUT OVERLOAD“ will be shown on display.

Fig. 9-2: Input Overload

In case input power is too high and the final amplifier is switched off by hardware, message „INPUT OVERLOAD 1“ will be shown on display.

Fig. 9-1: Input Overload 1

In case output power is higher than 1050 Watt for more than 500 ms, message „OUTPUT OVERLOAD“ will be shown.

Fig. 9-3: Output Overload

In case output power is higher than 1300 Watt for more than 100 ms, message „OUTPUT OVERLOAD MID“ will be shown.

Fig. 9-4: Output Overload Mid

In case output power is higher than 1500 Watt, the final amplifier will be switched off immediately and message „OUTPUT OVERLOAD HIGH“ will be shown.

Fig. 9-5: Output Overload High

In case output current is higher than 42 Ampere for more than 1000 ms, message „CURRENT OVERLOAD“ will be shown.

Fig. 9-6: Current Overload

9.2 ALC Connection

It is recommended to prepare an ALC connection between connected transceiver/s and HPA-8000B (9-pin D-Sub J1/J2 Pin 6 or RCA J7/J8) to prevent the power amplifier from overload.

For adjustment of ALC threshold trim pots P_{J7} / P_{J8} are intended. When adjustment is done the ALC meter on the transceiver can be used for optical control.

APPENDIX

- A1 Software Update and Update Program (for Windows ®)
- A2 Technical Documents
- A3 Customer Information

A1 SOFTWARE UPDATE AND UPDATE PROGRAM (FOR WINDOWS®) – GERMAN

A1.1 Preliminary Note

In diesem Anhang wird beschrieben, wie Sie die Betriebssoftware (= Firmware) des HPA-8000B aktualisieren (= Software-Update) und wie das dazu notwendige Update-Programm auf Ihrem PC installiert und eingerichtet wird.

Bitte beachten: Die Aktualisierung der Betriebssoftware des HPA-8000B erfordert Grundkenntnisse im Umgang mit einem Windows-Rechner. Wenn Sie bei Installation, Einrichtung und Anwendung neuer Programme unsicher sind, suchen Sie bitte Hilfe in Ihrem Umfeld oder nehmen Sie Kontakt zu Ihrem Händler oder zur Hilberling GmbH direkt auf.

A1.2 Requirements

Zum Aktualisieren der Betriebssoftware werden benötigt:

1. Ein Windows-Rechner mit:
 - Windows 7 SP1, 8.1 oder 10® (Administratorrechte erforderlich!);
 - 2 MB freier Speicherplatz auf der Festplatte;
 - USB-Anschluss;
2. Das Update-Installationsprogramm (= Setup-Software); von der mitgelieferten CD-ROM, per E-Mail oder Download;
3. Die neue HPA-8000B-Betriebssoftware; von CD-ROM, per E-Mail oder Download;
4. USB-Datenkabel (USB-A ↔ USB-B).

A1.3 Update Installation Program and Operating Software

Das Update-Installationsprogramm wird zusammen mit Ihrem HPA-8000B auf CD-ROM ausgeliefert. Es installiert das Programm „HPA-8000B Software Update“ auf Ihrem PC.

Legen Sie die CD-ROM in das CD-/DVD-/BD-Laufwerk ein.

Ist diesem Laufwerk auf Ihrem Rechner z.B. der Buchstabe D: zugeordnet, ist das Update-Installationsprogramm im folgenden Verzeichnis zu finden:

D:\Software\

Das Update-Installationsprogramm kann auch zunächst von der CD-ROM auf den Windows-Desktop oder in ein beliebiges Verzeichnis auf der PC-Festplatte kopiert werden, z.B. nach:

C:\Downloads\

Verfahren Sie mit der neuen HPA-8000B-Betriebssoftware (= Firmware) in gleicher Weise. Haben Sie diese auf CD-ROM erhalten, liegt sie im Verzeichnis

D:\Firmware\

Haben Sie die neue Firmware per E-Mail oder per Download als gepackte Archiv-Datei (ZIP-Datei) erhalten, muss sie vor der weiteren Verwendung entpackt werden.

Dazu die ZIP-Datei im Windows-Explorer mit rechter Maustaste anklicken und „Alle extrahieren“ auswählen. Den vorgeschlagenen neuen Ordner mit „extrahieren“ übernehmen. In diesem ist nun das entpackte Update-Installationsprogramm „HPA-8000B Software Update – Setup Vx.x.x.x.exe“ als ausführbare Datei enthalten.

A1.4 How to Install the Update Program

Doppelklicken Sie zum Start der Installation die Datei
HPA-8000B Software Update – Setup Vx.x.x.x.exe.

Diese liegt auf der CD-ROM in dem Verzeichnis \Software\.

Haben Sie die Datei zuvor auf die PC-Festplatte, z. B. nach C:\Downloads\ kopiert, doppelklicken Sie sie dort.

Es öffnet sich ein erstes Fenster zur Sprachauswahl.

Fig. A1-1: Setup – Select Language

Wählen Sie die Sprache aus, die während der Installation in den folgenden Fenstern benutzt werden soll.

Zur Verfügung stehen Deutsch und Englisch.

Haben Sie Ihre Wahl getroffen, klicken Sie auf OK.

Fig. A1-2: Setup – Close Other Applications

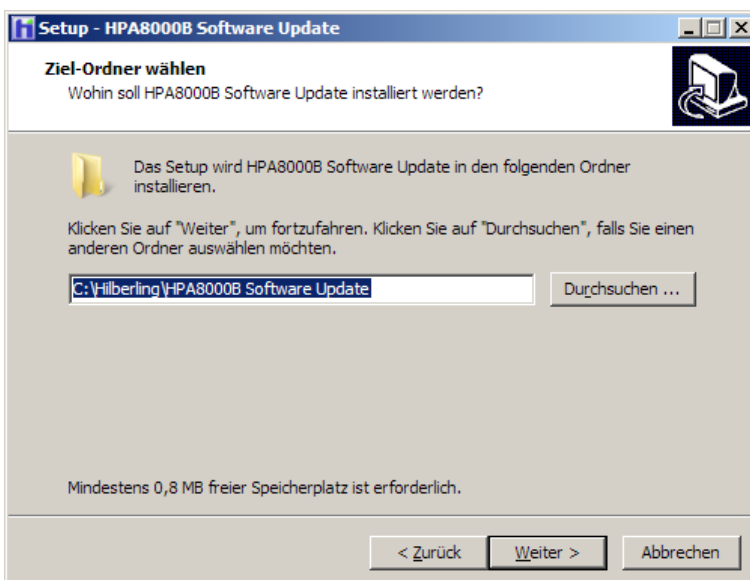

Es öffnet sich das erste Fenster des Setup-Programms.

Damit die Installation des Update-Programms problemlos erfolgen kann, sollten Sie alle anderen auf Ihrem PC gestarteten Anwendungsprogramme beenden.

Ist dies der Fall, klicken Sie auf *Weiter*.

Fig. A1-3: Setup – Select Target Folder

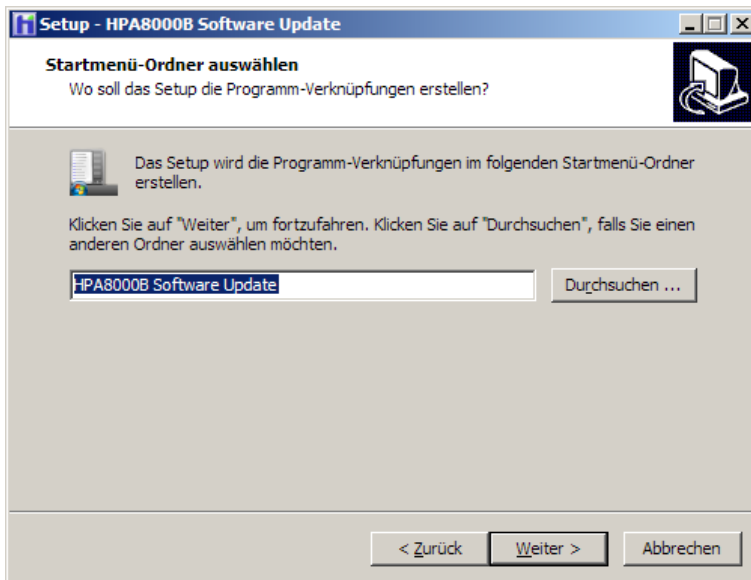

Als Zielordner für das Update-Programm ist C:\Hilberling\HPA8000B Software Update voreingestellt.

Möchten Sie das Programm in einem anderen Ordner bzw. Ordnerpfad speichern, klicken Sie auf die Schaltfläche *Durchsuchen ...* und wählen Sie den gewünschten Ordner aus.

Klicken Sie auf *Weiter*, um zur nächsten Einstellungsoption zu gelangen.

Fig. A1-4: Setup – Select Start Menu Folder

Das Setup-Programm erstellt eine Programm-Verknüpfung des Update-Programms standardmäßig in dem Startmenü-Ordner *HPA8000B Software Update*.

Möchten Sie die Programm-Verknüpfung in einem anderen Ordner speichern, klicken Sie auf die Schaltfläche *Durchsuchen ...* und wählen Sie den gewünschten Ordner aus.

Klicken Sie auf *Weiter*, um zur nächsten Einstellungsoption zu gelangen.

Fig. A1-5: Setup – Select Additional Tasks

Das Setup-Programm erzeugt standardmäßig keine Programm-Verknüpfung (=Desktop-Symbol) auf dem Desktop (Arbeitsfläche) des PCs.

Möchten Sie jedoch eine solche Verknüpfung für das Update-Programm auf dem Desktop erhalten, klicken Sie auf den Text *Desktop-Symbol erstellen* oder in das Kästchen daneben, so dass dort ein Haken angezeigt wird.

Klicken Sie auf *Weiter*, um zum nächsten Setup-Fenster zu gelangen.

Fig. A1-6: Setup – Summary / Ready for Installation

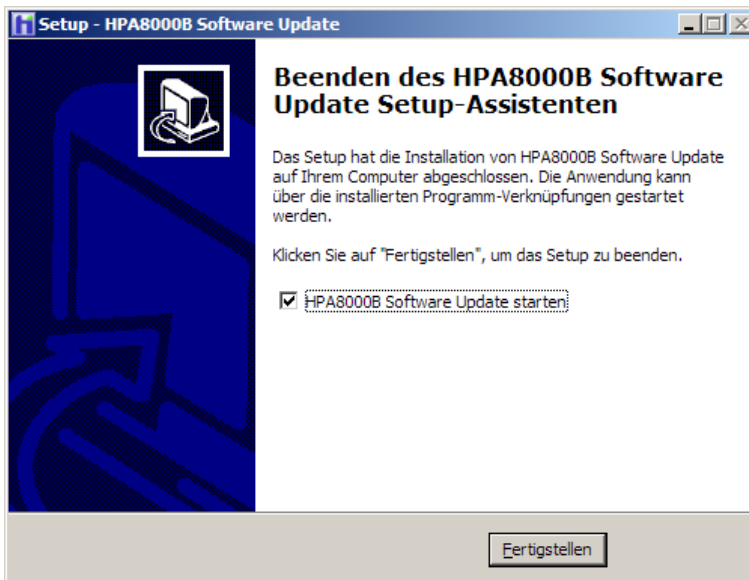

In diesem Fenster werden noch einmal die Einstellungen für den Zielordner der Programm-Datei und für den Startmenü-Ordner der Programm-Verknüpfung im Startmenü aufgelistet.

Möchten Sie eine Änderung vornehmen, klicken Sie auf die Schaltfläche *Zurück*.

Möchten Sie keine Änderung vornehmen, klicken Sie auf die Schaltfläche *Installieren*.

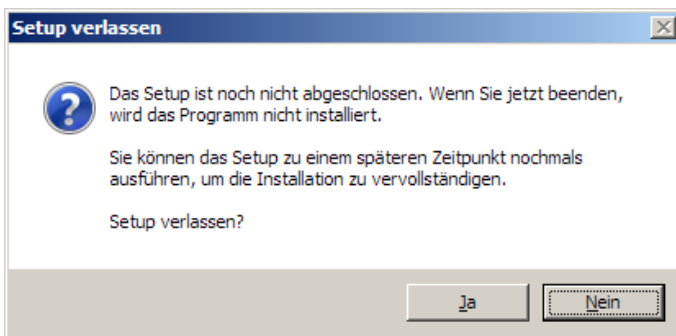

Die Programm-Datei wird installiert und die Programm-Verknüpfung(en) erstellt.

Fig. A1-7: Setup – Installation Completed / Exit Setup Assistant

Das Setup-Programm meldet in seinem letzten Fenster, dass die Installation wie gewünscht ausgeführt und abgeschlossen wurde.

Möchten Sie das nun neu auf Ihrem PC installierte Programm *HPA8000B Software Update* gleich nach dem Beenden des Setup-Programms starten, klicken Sie auf *Fertigstellen*

Soll das Update-Programm nicht gleich im Anschluss gestartet werden, klicken Sie zunächst auf den Text neben dem Haken oder den Haken selbst, so dass dieser ausgeblendet wird, und erst dann auf *Fertigstellen*.

Fig. A1-8: Setup – Cancel Installation / Exit Setup

Das Setup-Programm kann in allen Fenstern durch klicken auf die Schaltfläche *Abbrechen* beendet werden.

Außer beim ersten Fenster Sprachauswahl (Fig. A1-1) wird dann in einem Dialog-Fenster nachgefragt, ob die Installation abgebrochen werden soll.

Wenn Sie dies wünschen, klicken Sie auf *Ja*. Soll die Installation doch durchgeführt werden, klicken Sie auf *Nein*.

A1.5 Connect HPA-8000B to PC by USB Data Cable

Für die Durchführung des Software-Updates (siehe Abschnitt A1.7) wird zwischen dem HPA-8000B und dem PC eine Verbindung per USB-Datenkabel benötigt. Verbinden Sie den PC (beliebige USB-Buchse vom Typ USB-A) mit dem HPA-8000B (an der Buchse J9 vom Typ USB-B, siehe Sec. 4.1) mit einem geeigneten USB-Datenkabel (USB-A ↔ USB-B).

A1.6 Set HPA-8000B to Update Readiness

Für die Durchführung des Software-Updates (siehe nachfolgender Abschnitt A1.7) ist es ferner erforderlich, den HPA-8000B in Update-Bereitschaft zu versetzen.

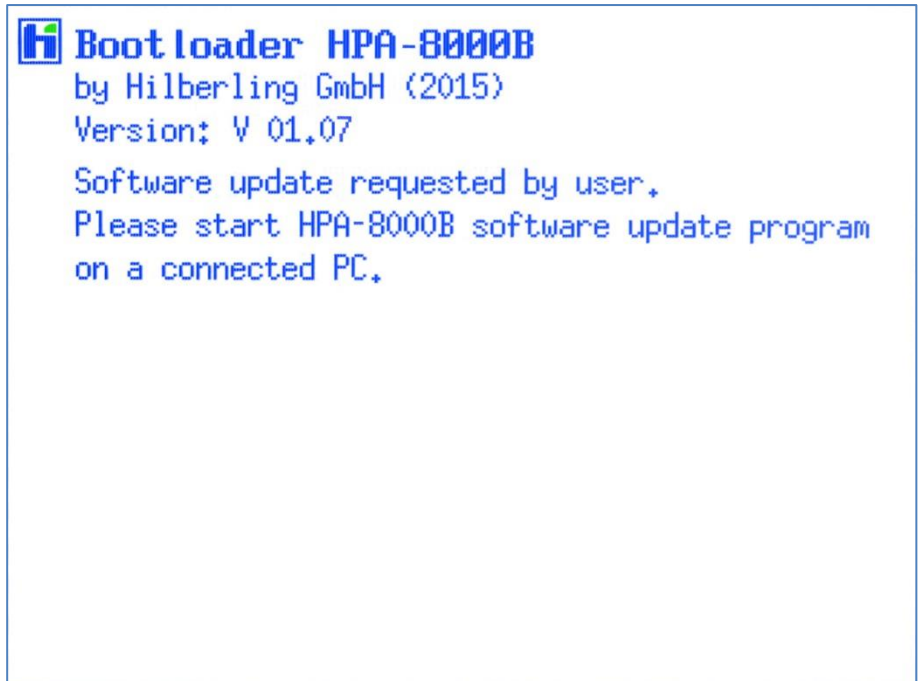

Rufen Sie dazu – wie im Abschnitt 5.4.1.1 *Update der Betriebssoftware* beschrieben – Softkey Menu und Bildschirm SOFTWARE UPDATE auf und beantworten Sie dort die Sicherheitsabfrage mit Ja (Softkey YES).

Sämtliche Betriebs-Funktionen des HPA-8000B werden nun deaktiviert, ebenso sämtliche LEDs (außer LED AC/On).

Auf dem Display wird der Bootloader-Bildschirm angezeigt (Fig. A1-9) mit dem Hinweis, dass der Nutzer ein Software-Update angefordert hat, und dass nun das Update-Programm auf dem PC gestartet werden sollte.

Soll das Update nicht durchgeführt werden, muss der HPA-8000B aus- und wieder eingeschaltet werden, um in den normalen Betriebsmodus zurück zu kehren.

Fig. A1-9: Screen BOOTLOADER

Der Bootloader kann auch direkt beim Einschalten des HPA-8000B aktiviert werden, indem die Taste **OPERATE** während des Einschaltvorgangs gedrückt gehalten wird.

A1.7 Start and Setup the Update-Program

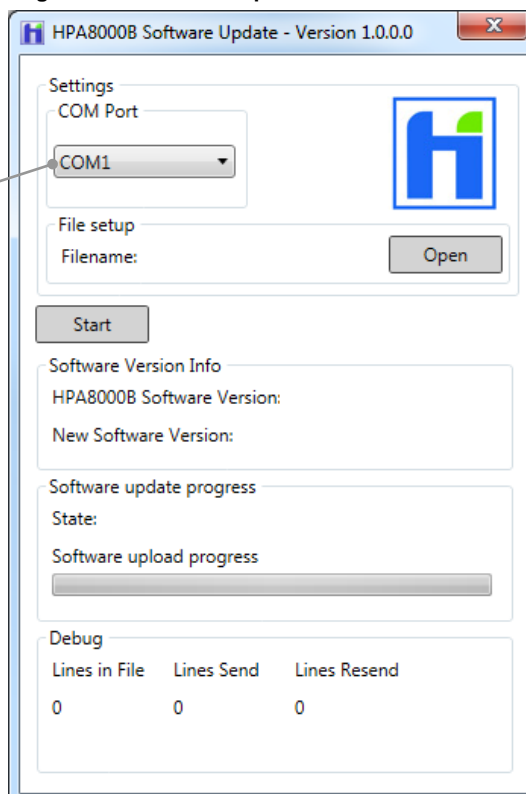

Ist das Update-Programm noch nicht gestartet, klicken Sie im Windows-Startmenü auf den Eintrag *HPA8000B Software Update* im folgenden Ordner:

Start → (Alle) Programme → HPA8000B Software Update

Es öffnet sich das Programmfenster:

Fig. A1-10: Software Update – Auswahl COM-Port

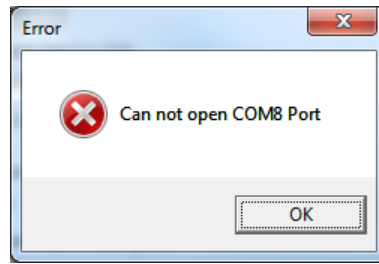

Klappmenü zur Auswahl eines freien COM-Ports

Im Bereich „COM Port“ erlaubt das Klappmenü die Auswahl eines freien COM-Ports für die Datenverbindung vom PC zum HPA-8000B über das angeschlossene USB-Kabel.

Im Klappmenü werden alle auf dem PC verfügbaren COM-Ports aufgelistet. Einige von diesen können aber bereits PC-intern belegt sein, so dass beim Starten des Update-Vorgangs eine Fehlermeldung angezeigt wird (Fig. A1-11), da die Datenverbindung nicht hergestellt werden konnte.

In diesem Fall muss aus dem Klappmenü ein anderer Port ausgewählt und der Update-Vorgang erneut gestartet werden.

Fig. A1-11: Software Update – COM-Port nicht nutzbar

Der im Klappenmenü ausgewählte bzw. bei Programmstart voreingestellte COM-Port des PC ist bereits belegt und kann für die Datenkommunikation zum HPA-8000B nicht verwendet werden.

Klicken Sie auf OK und wählen Sie aus dem Klappenmenü einen anderen COM-Port aus (Fig. A1-10).

Fig. A1-12: Software Update – Auswahl Betriebssoftware

- Schaltfläche zur Auswahl der neuen Betriebssoftware
- Dateiname der ausgewählten neuen Betriebssoftware
- Schaltfläche zum Starten des Update-Vorgangs
- Versionsnummer der neuen Betriebssoftware

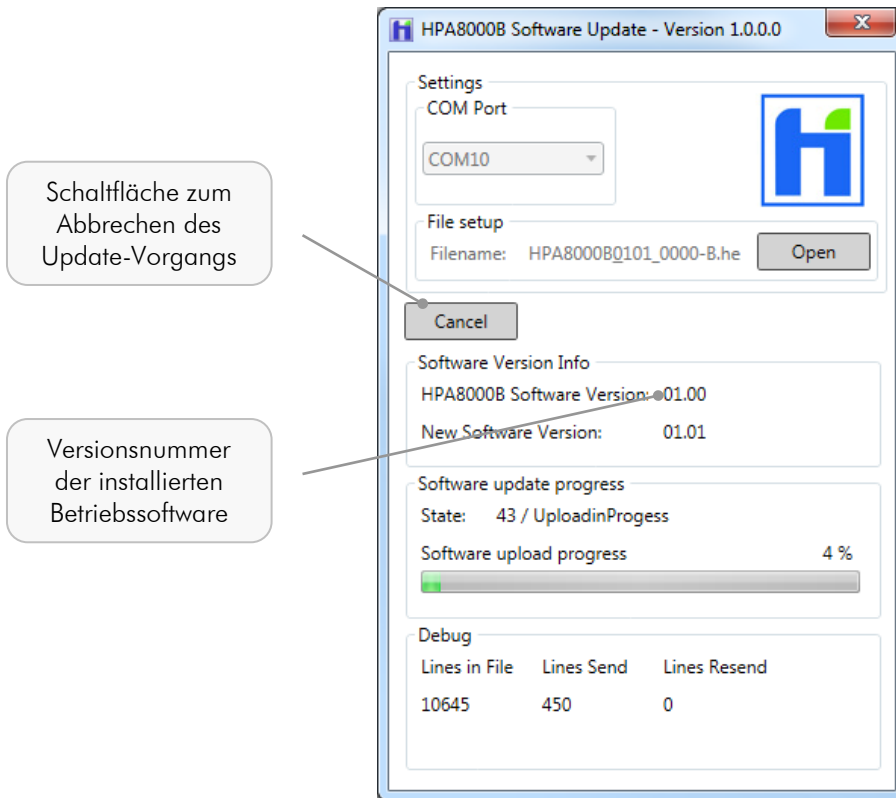

Im Bereich „File Setup“ wird mit der Schaltfläche „Open“ die neue Betriebssoftware ausgewählt. Es öffnet sich ein Windows-Dialogfenster, mit dessen Hilfe die neue Betriebssoftware im Dateisystem des PCs gefunden und ausgewählt wird.

Neben der Schaltfläche „Open“ wird nun der Dateiname („Filename“) der ausgewählten Betriebssoftware angezeigt. Darunter, im Bereich „Software Version Info“, wird die Versionsnummer der neuen Betriebssoftware eingeblendet.

Mit der Schaltfläche „Start“ wird die Datenverbindung zum HPA-8000B gestartet und ...

Fig. A1-13: Software Update – Update-Vorgang

Schaltfläche zum Abbrechen des Update-Vorgangs

Versionsnummer der installierten Betriebssoftware

... die Versionsnummer der installierten Betriebssoftware ausgelesen und im Fenster angezeigt. Die Übertragung der Software beginnt, was anhand des Fortschrittsbalkens und der Zahl der gesendeten Zeile (Lines Sent) überwacht werden kann.

Hat jedoch die „neue“ Betriebssoftware die gleiche oder eine niedrigere Versionsnummer als die installierte, wird zunächst in einem weiteren Dialogfenster nachgefragt, ob der Update-Vorgang dennoch fortgesetzt werden soll (Fig. A1-14).

Wird dies mit OK bestätigt, beginnt die Übertragung der Software, ein Klick auf Cancel führt das Update nicht aus.

Ist die Software-Übertragung gestartet, kann sie mit Klicken auf Cancel jederzeit abgebrochen werden. Es wird dann ein Hinweifenster eingeblendet (Fig. A1-15)

Fig. A1-14: Software Update – Software ist nicht aktueller

Dieses Fenster informiert, wenn die „neue“ Software nicht aktueller ist als die bereits installierte Software.

Klicken auf OK startet die Übertragung der „neuen“ Software auf den HPA-8000B.

Klicken auf Cancel schließt das Dialogfenster ohne Start der Software-Übertragung.

Fig. A1-15: Software Update – Update-Vorgang abgebrochen

Dieses Fenster wird angezeigt, wenn nach dem Start des Update-Vorgangs die Schaltfläche Cancel (siehe Fig. A1-4) angeklickt wurde.

Der Klick auf OK schließt das Fenster.

Die bisherige Software bleibt im Gerät erhalten. Der HPA-8000B muss einmal kurz ausgeschaltet werden, bevor er wieder bereit ist.

A2 TECHNICAL DOCUMENTS

A2.1 Technical Data

Tab. A2-1: Technical Data

Output Power (FM / AM / SSB / CW)	1 kW

Tab. A2-16: Input Power Ranges

Option (row)	Input Power Ranges
Input Power	50 Watt, 100 Milliwatt, 5 Watt

A3 CUSTOMER INFORMATION

A3.1 User Information

A3.1.1 Declaration of Conformity (shortened version)

Hilberling GmbH hereby declares that the HPA-8000B power amplifier complies with Directive 2014/53/EU. The complete declaration of conformity can be found on the website www.hilberling.de.

A3.1.2 Note Amateur Radio Operation

The Hilberling GmbH is obliged as a manufacturer of transmitter devices to draw attention to the following legal provisions:

The following restrictive conditions apply:

This device is intended for use by radio amateurs within the meaning of the law on amateur radio in the valid amended. During operation of the device, the amateur radio law and supplementary laws and regulations must be observed.

In Germany, as in other EU countries, special provisions for the acquisition, ownership and operation of amateur radio apply. Acquisition and ownership of this device by unauthorized persons can already be punishable!

Even if the devices PT-8000A should have extended frequency ranges, radio amateurs are generally allowed to use only the assigned ham radio frequencies depending on their country.

A3.2 Warranty Terms

Guarantee

For amateur radio power amplifier HPA-8000B legal guarantee determinations apply only if the device is operated in a manner corresponding to its intended use. This includes in particular the compliance with the operating limits mentioned in this manual.

A3.3 Disposal Rules

Used electrical and electronic equipment must not longer be placed in unsorted municipal waste in accordance with European standards. They must be collected separately and have to be disposed of by a public-service-disposer or equivalent private companies.

The symbol of the crossed out wheeled bin on rear panel indicates the need for separate collection.

According to the German *“Gesetz über das Inverkehrbringen, die Rücknahme und die umweltverträgliche Entsorgung von Elektro- und Elektronikgeräten”*, short ElektroG, the Hilberling GmbH is registered by the *Stiftung Elektro-Altgeräte Register* as a distributor of electrical and electronic equipment under WEEE registry number DE 19129052 and thus participate in the common disposal of electrical and electronic waste.

If there are any questions, please contact Hilberling GmbH as follows:
