# CHAPTER I - GENERAL INFORMATION

## General Description

The Hy-Gain Discoverer 7-2 is an optimum spaced, two element beam for the 40 Meter Amateur band. The Discoverer 7-2 incorporates the principles of linear-loading which results in lower loss and greater radiation efficiency than is possible with loading coils.

The Discoverer 7-2 features stainless steel hardware and clamps on all electrical and most mechanical connections.

### WARNING

**When installing your system, take extreme care to avoid any accidental contact with power lines or overhead obstructions. Failure to exercise this care could result in serious or fatal injury.**

## SPECIFICATIONS

### *Mechanical*

Total Number of Elements.....	2
Maximum Element Length .....	44.8 ft. (13.7 m)
Boom Length.....	22.6 ft. (6.9 m)
Boom Diameter.....	.2 in. (51 mm)
Turning Radius .....	25.0 ft (7.6 m)
Accepts Mast .....	1.625 - 2.5 in. (41-64 mm)
Maximum Wind Survival .....	80 mph (128.7 kmph)
Wind Surface Area.....	6.0 sq. ft. (0.56 sq. m)
Effective Moment*.....	1412 ft.-lb. (192 kg-m)
Wind Load at 80 mph .....	154
Hardware.....	stainless steel hardware and clam

### *Electrical*

Suitable Rotors.....	Hv-Gain Ham
Maximum Gain.....	f)J dBi (4.3 dBd)
Front-to-BackRatio(maximum).....	15 dB
Number of Settings.....	3
Band Width	
10 dB Front-to-Back.....	70 - 90 KHz 3:1
VSWR.....	275 KHz @ 60 ft.
2:1 VSWR.....	187 KHz @ 60 ft.
VSWR at Resonance .....	less than 1.2
Nominal Impedance.....	50 ohms
Lightning Protection.....	DC ground -3 dB
Beam Width .....	77 degrees @ maximum Front-to-

\*Effective Moment is defined as the product of the weight of the antenna and the turning radius. This figure should be used when selecting an appropriate rotator.

# CHAPTER 2 -PRE-ASSEMBLY

## Preparation for Assembly

### FOR OUR OVERSEAS CUSTOMERS:

The United States uses American units of measurement. If you use the Metric System, see "Converting American Measurements to Metric"

Choose a large clear area to assemble your antenna. The area must be at least 23' x 45' (7m x 14m). If you assemble this antenna over a grassy area, precaution should be taken so that hardware is not accidentally lost during assembly. A concrete driveway is an excellent area for assembly.

**TOOLS:** The following tools are required for 'easy assembly of the Discoverer 7-2.

#### TYPE OF TOOL

*Tape Measure, 12 foot .....*

**Adjustable Wrench, 8 inch**

*Nut Driver, 7/16 inch .....*

**Nut Driver, 3/8**

**Nut Driver, 5/16 in**

**Standard Hand**

**NOTE:** When unpacking your antenna, check inside of all tubing for parts (smaller tubing etc.). To conserve space these smaller articles are sometimes put inside larger pieces. Check all parts against the Parts List to make sure no parts are missing.

All tubing supplied with the Discoverer 7-2 telescopes together. Make all measurement to the given dimensions, plus or minus (+/-), no more than 1/8 inch! The assembly of this antenna will be easier if you read this manual completely through at least twice before beginning assembly. Allow at least 6 hours for assembly. Double and triple check ALL dimensions after assembly.

## Corrosion Precautions

The Discoverer 7-2 antenna is designed to be relatively maintenance free for most environments. All hardware is made of passivated stainless steel, typically grade 304. The internal tooth-type lockwashers used in this antenna are grade 410 stainless steel, and are slightly magnetic. The element tubing clamps are grade 304 stainless steel. Most other metallic parts are aluminum. All insulators exposed to sunlight are made from U.V resistant black polyethylene or black Cylolac®.

We have supplied a 3 oz. tube of Penetrox®A-3 from Bumdy Corporation for use as an anti-oxidant within element tubing assemblies. This prevents aluminum oxide from forming on the aluminum surfaces, especially in coastal environments.

Cut the cap off the tube of Penetrox®A-3. Have some rags available to clean off excess from tubing and hands. Be careful not to get this on your clothing.

Before assembling the tubing sections, abrade the mating surfaces with a wire brush or sandpaper. Apply the anti-oxidant to both surfaces, then assemble joint. Wipe off any excess material.

A light amount of clear lacquer or an acrylic spray may be used to coat the exterior surface of the element assemblies if this antenna is to be installed near a sea coast. Tighten all joints securely before coating!

[Penetrox®](#) is a registered trademark of Bumdy Corporation  
[Cylolac®](#) is a registered trademark of Borg-Warner

# CHAPTER 3 -

## Assembly of the Boom-To-Mast Brackets and Boom

Refer to Figure 1 and begin as

Select the boom-to-bracket clamp and casting-to-boom bracket (Item Nos. 2 and 3) and loosely assemble them on the boom sections (Item No. 51) with the two 5/16"-18 x 2 3/4" bolts, split lockwashers and nuts (Item Nos. 25, 27 and 26 and the four (4) 1/4" - 20 x 3/4" bolts, internal lockwashers and nuts (Item Nos 30, 32 and 34).

Attach the remaining boom sections (Item No. 50) and secure with the two (2) 1/4" - 20 x 21/2" bolts, internal lockwashers and nuts (Item Nos. 53, 32 & 34). Tighten all hardware securely.

AO - 372S - C - 001

Item No.	Description	Item No.	Description
2	Bracket, Casting-to-Boom	32	Lockwasher, internal, 1/4" - 20
3	Clamp, Boom-to-Bracket	34	Nut, hex, 1/4" - 20
25.	Bolt, hex head, 5/16"-18 x 2 3/4"	50	Tube, Boom, 2" x 83" 83"
26	Nut, hex, 5/16" -18	51	Tube, Boom, 2" x 54 3/4",
27	Lockwasher, split, 5/16"	53	Bolt, hex head, 1/4" - 20 x 21/2"
30	Bolt, hex head, 1/4" - 20 x 3/4"		

Figure 1 Assembly of Boom Tubes to Casting-to-Boom Bracket and Boom-to-Bracket Clamp

## Element-To-Boom

To save time, loosely assemble both of the element-to-boom brackets and their appropriate hardware before beginning further installation of the antenna. See Figure 2. The different sized brackets can be identified by a number stamped into the surface of each bracket half. **DO NOT** tighten the bolts until instructed to do so.

Slide each assembled bracket over each boom end. Position the center of each bracket 3 inches from the boom ends. **DO NOT** tighten at this time.

NOTE: ASSEMBLY HARDWARE FOR THE DRIVEN ELEMENT BRACKET IS THE SAME AS USED ON THE REFLECTOR BRACKET.

## Assembly of the Driven Element

Select the parts, as listed in Figure 3, and assemble them as shown. Before tightening the hardware, make sure that:

DE1 (Item No. 10) is inserted completely into the driven element insulator.

DE1 (Item No. 10) is positioned with the small holes up and down.

DE1 (Item No. 10) is positioned at 90 degrees from the boom-to-mast bracket, so that the element will be horizontal when installed on the mast.

Figure 3 Assembly of the Driven Element

## Installation of Tubing

Select the #6 tubing clamp as shown in the chart. When installing the clamp, place the clamp near the tube end with the top of the clamp over the slot in the tube as shown in Figure 4.

After adjustment of the tubing lengths, tighten the clamp with a 5/16 inch nut driver, socket, or open end wrench until the tubing will not twist or telescope.

Part No.	Description	Fits Tubing Sizes
358756	Clamp, Size #6 all stainless steel 5/16" hex head screw	1/2 and 3/4"

**Figure 4**  
Tubing Clamps

Refer to Figure 4 for tubing clamp assembly information. Tighten these clamps securely after setting Item Nos. 7 and 49 to their proper length.

The Discoverer 7-2 is supplied with dimensions for three (3) settings within the 40 Meter Amateur band. The three (3) settings are entitled CW, MID, and PHONE. The CW setting is optimized for operation from 7.00-7.15 MHz. The MID setting is optimized for operation from 7.05-7.25 MHz and the PHONE setting is optimized for operation from 7.15-7.30 MHz.

The VSWR, Front-to-Back Ratio, and Gain curves are shown in Figures 5, 6, and 7. From this information, choose one of the three settings to use.

Set the length of the DE5 section A to one of the lengths shown in Table 1.

**Figure 5**  
VSWR Charts

## Assembly of the Reflector Element

Select the parts listed in Figure 8 and assemble them as shown. Before tightening the hardware, make sure that:

R1 (Item No. 10) is inserted completely into the element-to-boom brackets.

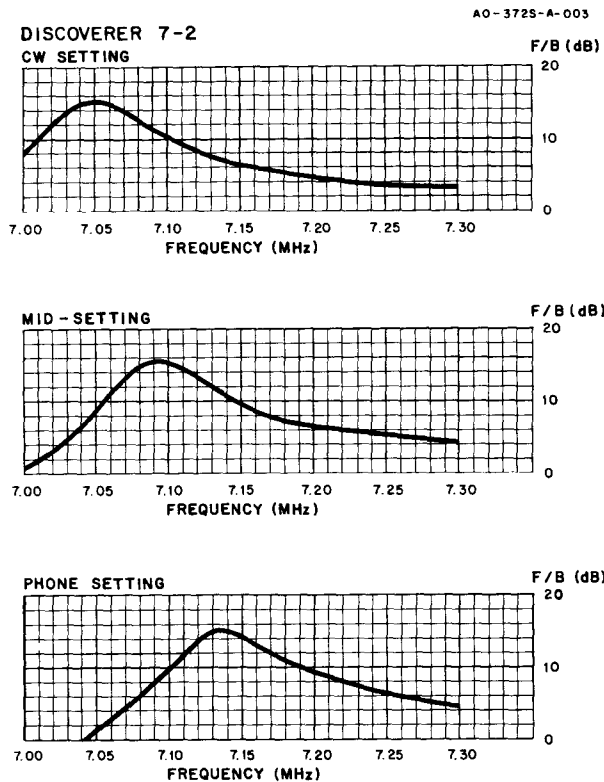

R1 (Item No. 10) is positioned with the small holes up and down.

R1 (Item No. 10) is positioned so that the element will be horizontal when installed on the mast.

Tighten the anchor bolts (Item No. 28) last. This will ensure that the element will not slip on the boom.

Refer to Figure 4 for tubing clamp assembly information. Tighten these clamps securely after setting Item Nos 6 & 7 to their proper length.

Set the length of the RS section ("B") to one of the lengths in Table 2. The reflector and driven element must both be adjusted to the same setting for proper operation.

## Driven Element and Reflector Linear-loading Wire Assembly

Select the parts listed in Figure 10. Refer to Figures 10, 11, and 12 for assistance in assembling and identification of the linear-loading wire assembly. Start assembling the linear-loading wire section (LLW) to the elements, beginning at the 40 meter insulator.

The 7/8" tubing clamp (Item 42) as shown in Detail A of Figure 11 should be positioned as close as possible to the 40 meter insulator. Other clamps and wire positions will depend upon the final assembly of the linear loading wires.

Repeat this instruction for each half of the driven and reflector element.

Tighten all bolts securely!

Item No.	Description

# Beta Match Assembly

AO-3725-A-

Select the parts listed in Figure 13 and Detail A and assemble them as shown. The beta shorting clamp should be flush with the ends of the beta rods. After attaching your coax cable to the feedpoint, tighten all hardware securely.

NOTE: Do Not allow the beta rods to touch the element-to-boom bracket.

Item No.	Description
10	Tube, Element, DEJ and R1, 1 1/4" x 83"
17	Insulator, Element, DE1
18	Beta Rod, 1/4" x 72"

54	Bolt, hex head, #10 - 24 x
55	Clamp, Beta Shorting
56	Clamp, Tubing, 1 1/4"

Figure 13 Beta Match Assembly

## Lightning

For proper lightning protection you must ground your antenna supporting structure. Grounding will ensure noise-free operation and low SWR. A proper ground consists of a 1/2" x 8' copper-clad steel ground rod driven into the ground approximately 12 inches away from the concrete tower base. Connect the tower to the ground rod using #8 copper wire and commercial noncorrosive ground clamps.

## Attachment of

Strip your coaxial cable (maximum 7 inches) and install solder lugs (not supplied) and connect to the driven element as shown in Figure 13. An RF choke made from 12 turns of RG-213/u coax in a 14 inch diameter circle is recommended with a split coax feed.

An alternative is to use a Hy-Gain BN-86 or BN-4000 50 ohm balun for easy connection to your coax cable. "Pigtail" leads of #10 gauge stranded wire 7 inches long should be used from the balun to the tubing clamps.

Use a good quality 50 ohm coaxial transmission line such as Belden 8214 (foam) or Belden 8237, 8267 or 9251 (solid). Take extra care when soldering connectors to foam dielectric coaxial cable. Weather-proof all connectors, which will be exposed to rain or ice, with Coax-Seal© or another similar substance.

Attach the transmission line to the feedpoint and tighten the hardware securely. Tape the coax to the boom and mast to ensure good strain relief.

## Boom Support Assembly

Select the 2 inch ID boom support clamps (Item No. 62) and the boom support straps (Item No. 61) and assemble on the boom 100 inches from the center of the boom-to-mast clamp as shown in Figure 14. Tighten the bolts securely.

Select the 20 foot boom support cable and cut into two equal lengths with a large pair of wire cutters. Attach one end of each cable to the boom support straps using the thimbles (Item No. 59) provided. See Figure 14. Attach the turnbuckles (Item No. 57) to the opposite ends of the cable as shown.

Measure the length of the assembled support cable and turnbuckle as shown. Install the 3/8" x 2" bolt, lockwasher and nut in each half so that they will be available after the antenna has been hoisted to the top of the tower. Also, tighten the turnbuckles so they will not vibrate loose. Route both cables along the boom and tape near the boom-to-mast bracket so they can be reached after the antenna has been mounted on the tower.

Item No	Description	Item No.	Description
32	Lockwasher, internal, 1/4" - 20	60	Mast Clamp, Boom Support, 15/8" I.D.

Figure 14 Boom Support Assembly

# CHAPTER 4 - INSTALLATION

## Installation

Make sure **all** tubing clamps and anchor screws are securely tightened. Also, make sure all beta-match hardware is tightened securely and free of corrosion.

**IMPORTANT:** The Discoverer 7-2 is a fairly large and heavy antenna and requires some consideration as to how you are going to get it to the top of the tower. Thoroughly read this section before beginning to install your antenna.

## Installation on a Crank-Up Tower

Crank the tower down completely or as low as it will go, and block all sections from moving by using a 2" x 4" piece of wood or a solid iron bar for heavier towers. The block should be inserted through the lattice structure before the tower is completely down, then the tower can be cranked down until the block takes the weight off the winch.

Use a ladder to reach the top of the tower. Never climb the lattice structure of any Crank-up Tower! Attach the mast to the tower and rotator. (The cast aluminum boom-to-mast bracket should be installed on the mast as shown in Figure 15.) Attach a gin pole to the tower to assist in lifting the Discoverer 7-2.

Attach the lifting rope to the balance point of the antenna. The lifting rope should be fed through the gin pole or other pulley arrangement attached to the tower. The other end should be at ground level, available to the ground crew for lifting. Guide ropes may be loosely looped over the boom ends and used by the ground crew to guide the antenna away from the tower and ladder. The guide rope's two loose ends should be held by the ground crew so that the guide rope can be retrieved.

## Attaching the Antenna to the Mast

Assemble the two cast aluminum brackets (Item No. 1) on the mast at the desired height above your tower. Secure the two brackets together using the two (2) 5/16"-18 x 3" bolts, lockwashers, and nuts (Item Nos. 24, 27, & 26). You may wish to drill a 5/16" hole through the cast brackets' center hole and through the mast and secure using a 5/16"-18 x 4" bolt, lockwasher, and nut (Item Nos. 66, 27, & 26). This bolt will prevent the antenna from twisting on the mast in high winds. See Figure 1.

When the antenna reaches the mast bracket, the four (4) 5" bolts should be inserted through the holes in the mast bracket and secured using 5/16" - 18 lockwashers and nuts (Item Nos. 23, 27 and 26). Tighten all bolts securely. You may wish to use a deep-well socket set to tighten these bolts.

The boom support cables may now be untaped from the boom and attached to the mast. Loosen the turnbuckles and slide the entire assembly up the mast until the boom support wires are straight. Tighten the 3/8" - 16 bolts securely. Take up any slack in each wire with the turnbuckles, until the boom is level. When taut, tie off the turnbuckles. See Figure 14.

Ite No.	Description	Item No.	Description

Figure 15 Attaching Boom-to-Mast Bracket

### Other Types of

When installing the Discoverer 7-2 on a guyed tower, you may wish to use a different guide system. If you have insulators on your guy wires, you will need to keep the antenna away from the guy wires as well as the tower. You may wish to use two ropes attached to the ground about 15 feet apart. These two ropes can then be used to slide the antenna on as it is also being lifted. The two ropes will need to be far enough from the tower base to allow some sag and still support the antenna away from the guy wires.

This completes your installation. Happy Dx'ing!

### WARNING

Installation of this product near power lines is dangerous. For your safety follow the instructions.

# CHAPTER 5 SERVICE / PARTS LIST

## Service Information

If you are encounter technical problems and need assistance, you should contact Hy-Gain Customer Service Department.

All requests, inquires, warranty claims, or for ordering replacement parts, contact:

## Converting American Measurements to Metric

Use this scale to identify lengths of bolts, diameters of tubes, etc. The American inch (") and foot (') can be converted to centimeters in this way.

$$1 \text{ inch (1")} = 2.54 \text{ cm}$$

$$1 \text{ foot (1')} = 30.48 \text{ cm}$$

$$\text{Example: } 42" \times 2.54 = 106.7 \text{ cm}$$

# ***hy-gain***<sup>®</sup> LIMITED

*hy gain* Warrants to the original owner of this product, if manufactured by *hy gain* and purchased from an authorized dealer or directly from *hy gain* to be free from defects in material and workmanship for a period of 12 months for rotator products and 24 months for antenna products from date of purchase provided the following terms of this warranty are satisfied.

1. The purchaser must retain the dated proof-of-purchase (bill of sale, canceled check, credit card or money order receipt, etc.) describing the product to establish the validity of the warranty claim and submit the original or machine reproduction of such proof-of-purchase to *hy-gain* at the time of warranty service *hy-gain* shall have the discretion to deny warranty without dated proof-of-purchase. Any evidence of alteration, erasure, or forgery shall be cause to void any and all warranty terms immediately.

2. *hygain* agrees to repair or replace at *by gain's* option without charge to the original owner any defective product under warranty, provided the product is returned postage prepaid to *hygain* with a personal check, cashiers check, or money order for \$8.00 covering postage and handling.

3. Under no circumstances is *hygain* liable for consequential damages to person or property by the use of any *hygain* products.

4. Out-of-warranty Service: *hygain* will repair any out-of-warranty product provided the unit is shipped prepaid. All repaired units will be shipped COD to the owner. Repair charges will be added to the COD fee unless other arrangements are made.

5. This warranty is given in lieu of any other warranty expressed or

6. *hygain* reserves the right to make changes or improvements in design or manufacture without incurring any obligation to install such changes upon any of the products previously manufactured.

7. All *hy-gain* products to be serviced in-warranty or out-of-warranty should addressed to *hvgain*. 308 Industrial Park Road.  
Mississippi 39759, USA and must be accompanied by a letter describing the problem in detail along with a copy of your dated proof-of-purchase.

8. This warranty gives you specific rights, and you may also have other rights which vary from state to state.
