INSTALLATION SUGGESTIONS

AS ILLUSTRATED YOU CAN MAKE UP A NEAT INEXPENSIVE SELF SUPPORTING ANTENNA STRUCTURE AS INDICATED OR ATTACH TO YOUR TOWER OR HOUSE STRUCTURE

1st ORDER OF PROCEEDURE, CUT THE COPPERWELD WIRE INTO 7 LENGTHS: (2) PCS 34'-6" LONG (THE 40 METER SECTION) (2) PCS 21'-6" LONG (THE 80 M. SECT.), (2) 5' LONG AND (1) 4' LONG. THEN ANCHOR THE "BALUN" AND TIE THE 40 METER SECTION APEX TO THE MAST AT ABOUT 36' ABOVE GROUND FOR BEST RESULTS.

NOTE: -TIE BOTH INSULATORS TOGETHER IN A LOOSE LOOP APPROX 6" DIA. (USE THE 4' LGTH)

NOTE - DIMENSIONS GIVEN ARE APPROX. IT IS IMPOSSIBLE TO PROVIDE EXACT DIMENSIONS BECAUSE OF VARYING GROUND CONDUCTIVITY AND SURROUNDING OBJECTS WHICH CAUSE THE ANTENNA TO LOOK LONGER OR SHORTER AT YOUR SITE.

YOU CAN BY CUT AND TRY, EFFECT EXACT RESONANCE TO YOUR FAVORITE SECTOR OF THE 40 M. BAND BY INCREASING OR DECREASING THE LGTHS. OF THE 40 M. ANTENNA SECTION, THEN PROCEED TO DO THE SAME WITH THE 80 M. SECTION.

UNLESS EQUIPPED WITH THE PROPER INSTRUMENTATION AND ABILITY, WE SUGGEST YOU PUT THE ANTENNA UP AS SUGGESTED - SIT BACK AND HAVE FUN -

NOTE! TELREX INVERTED "V" DOUBLET KITS DO NOT REQUIRE GND RADIALS, INEXPENSIVE AND EASY TO INSTALL PROPERLY. - WILL OUTPERFORM ANY MULTI-BAND DOUBLET OR VERTICAL!

TELREX "BALUN" FED 40 and 80 METER "DUO-BAND" INVERTED "V" KIT 1KW PEP MODEL IV/5C48 \$24.95
