

MODEL R-42

The Model R-42 speaker is designed for use with the Hallicrafters Model SX-42 radio receiver, but may also be used with any other receiver, such as the Hallicrafters Models SX-43 and SX-46, or with public address systems. An 8-inch permanent magnet dynamic type speaker unit is employed in the speaker cabinet, in which the bass reflex principle has been incorporated to provide high quality reproduction over an audio range of approximately 70 to 7500 cycles.

Two terminals are provided for making the necessary connections. Connect wire leads from these terminals to the 500/600 ohm terminals at the rear of the receiver chassis or to the output terminals of a public address system.

The switch, located on the front of the speaker cabinet, provides a choice of two frequency responses; when set at *COMMUNICATIONS*, the voice frequency range is accentuated and noise frequencies are reduced; when set at *HIGH FIDELITY*, the overall frequency range of approximately 70 to 7500 cycles is reproduced.
