

You may need the new T-UG8 desk stand or one of these STAND ADAPTOR KITS to convert to the new transistorized CB and ham outfits...but

THE D-104 MIKE STILL REIGNS SUPREME

When you convert your Astatic G Grip-to-talk Stand with a TG Adaptor Kit, or UG8 Stand with TU Kit, you obtain impedance match and gain control. A complete, new T-UG8 Stand does the same thing for you. Without buying a new mike, you still have the finest that money can buy.

- Kits and T-UG8 Stand provide sufficient level to fully modulate transmitters with any Astatic "Plug-in" Mike.
- Volume control under base adjusts with screw driver to prevent over-modulation from absent-minded fiddling or tampering, after you find the sweet spot.
- Rugged Silicon type transistors in a printed circuit.
- Noise-free, click-free switching with silver contacts which do not need cleaning.
- Internal slide switch for choice of relay or electronic type control (Available in T-UG8 Stand only).
- Powered by internal, 9-volt, readily available battery.
