

130-Watt (PEP) 10-Channel HF/Single-Sideband Transceiver

- **MORE RANGE PER POUND**
The ASB-130 system is the smallest, lightest and most powerful 10-channel, SSB airborne transceiver available. Total system weight is only 16½ pounds.
- **FCC ACCEPTED AND FAA AUTHORIZED**
The ASB-130 is FCC-type accepted (Parts 83 & 87) and FAA TSO-authorized (C-31c & C-32c, category A).
- **QUIET OPERATION**
Adjustable squelch permits noise-free radio watch, reducing pilot fatigue.
- **MODULAR CIRCUIT DESIGN**
Solid-state, plug-in circuit boards facilitate frequency changing and maintenance.

APPLICATIONS

The ASB-130 system has been designed by Sunair for use in virtually any aircraft...fixed or rotary-wing...piston or jet. The compact control head (shown above) makes the ASB-130 ideally suited for applications where panel space is limited. The power amplifier/power supply and receiver/exciter can be mounted together or apart in any convenient location.
