DIRECT SUPPORT AND GENERAL SUPPORT MAINTENANCE MANUAL

CONTROL GROUP
AN/GRA-6
(NSN 5820-00-644-4554)

This publication is required for official use or for administrative or operational purposes only. Distribution is limited to US Government Agencies. Other requests for this document must be referred to Commander, US Army Communications.Electronics Command and Fort Monmouth, ATTN: AMSEL-ME-P, Fort Monmouth, NJ 07703-5000.

DEPARTMENTS OF THE ARMY AND THE AIR FORCE
1 JANUARY 1987
Adequate ventilation should be provided while using TRICHLOROTRIFLUOROETHANE. Prolonged breathing of vapor should be avoided. The solvent should not be used near heat or open flame, the products of decomposition are toxic and irritating. Since TRICHLOROTRIFLUOROETHANE dissolves natural oils, prolonged contact with the skin should be avoided. When necessary, use gloves which the solvent cannot penetrate. If the solvent is taken internally, consult a physician immediately.

Compressed air shall not be used for cleaning purposes except where reduced to less than 29 pounds per square inch (psi) and then only with effective chip guarding and personnel protective equipment. Do not use compressed air to dry parts when TRICHLOROTRIFLUOROETHANE has been used. Compressed air is dangerous and can cause serious bodily harm if protective means or methods are not observed to prevent chip or particle (of whatever size) from being blown into the eyes or unbroken skin of the operator or other personnel.
SAFETY STEPS TO FOLLOW IF SOMEONE IS THE VICTIM OF ELECTRICAL SHOCK

1. DO NOT TRY TO PULL OR GRAB THE INDIVIDUAL

2. IF POSSIBLE, TURN OFF THE ELECTRICAL POWER

3. IF YOU CANNOT TURN OFF THE ELECTRICAL POWER, PULL, PUSH, OR LIFT THE PERSON TO SAFETY USING A WOODEN POLE OR A ROPE OR SOME OTHER INSULATING MATERIAL

4. SEND FOR HELP AS SOON AS POSSIBLE

5. AFTER THE INJURED PERSON IS FREE OF CONTACT WITH THE SOURCE OF ELECTRICAL SHOCK, MOVE THE PERSON A SHORT DISTANCE AWAY AND IMMEDIATELY START ARTIFICIAL RESUSCITATION

Section I. GENERAL INFORMATION

1-1. SCOPE
This manual describes Control Group AN/GRA-6 and covers Direct and General Support maintenance.

1-2. CONSOLIDATED INDEX OF ARMY PUBLICATIONS AND BLANK FORMS
Refer to the latest issue of DA Pam 310-1 to determine whether there are new editions, changes or additional publications pertaining to the equipment.

1-3. MAINTENANCE FORMS, RECORDS, AND REPORTS
   a. Reports of Maintenance and Unsatisfactory Equipment. Department of the Army forms and procedures used for equipment maintenance will be those prescribed by DA Pam 738-750 Maintenance Management Update. Air Force personnel will use AFR 66-1 for maintenance reporting and TO-00-35D54 for unsatisfactory equipment reporting.
   b. Report of Packaging and Handling Deficiencies. Fill out and forward SF 364 (Report of Discrepancy (ROD)) as prescribed in AR 735-11-2/DLAR 4140.55/NAVMATINST 4355.73B/AFR 400-54/MCO 4430.3H.

1-4. DESTRUCTION OF ARMY ELECTRONICS MATERIEL
Destruction of Army electronics materiel to prevent enemy use shall be in accordance with TM 750-244-2.

1-5. OFFICIAL NOMENCLATURE, NAMES, AND DESIGNATIONS
Refer to TM 11-5820-489-10.

1-6. REPORTING EQUIPMENT IMPROVEMENT RECOMMENDATIONS (EIR)
   a. If your equipment needs improvement, let us know. Send us an EIR. You, the user, are the only one who can tell us what you don’t like the design. Put it on an SF 368 (Quality Deficiency Report). Mail it to Commander, US Army Communications-Electronics Command and Fort Monmouth, ATTN: AMSEL-PA-MA-D, Fort Monmouth, New Jersey 07703-5000. We’ll send you a reply.
   b. Air Force personnel are encouraged to submit EIR’s in accordance with AFR 900-4.

Section II. EQUIPMENT DESCRIPTION AND DATA

1-7. TABULATED DATA
Refer to TM 11-5820-489-10.

1-8. LOCATION AND DESCRIPTION OF MAJOR COMPONENTS
Refer to TM 11-5820-489-10.

1-9. EQUIPMENT CONFIGURATION
Refer to TM 11-5820-489-10.

1-10. SAFETY, CARE, AND HANDLING
Observe all WARNINGS, CAUTIONS and NOTES contained in this manual.
1-11. NOMENCLATURE CROSS-REFERENCE LIST

REMOTE ............................................................. C-433/GRC
LOCAL ............................................................. C-434/GRC
HS ................................................................. H-33(*)/PT

Section III. TECHNICAL PRINCIPLES OF OPERATION

1-12. FUNCTIONAL ANALYSIS

a. Control Group AN/GRA-6 provides:
   ● Talking and listening capabilities for one or two receiver-transmitters to a remote
     position.
   ● Telephone communications and ringing between remote and local control positions.
   ● Power control of radio set from remote position.

b. Control Group AN/GRA-6 consists of these basic circuit elements:
   ● Telephone circuit
   ● Ringing circuit
   ● Control circuit

Each control unit provides a line transformer (T1) with a microphone input, receiver output and balanced 600-ohm line windings.

Both transformers (T1) joined by telephone line form the basic telephone circuit.

Microphone voltage is provided by flashlight dry cells (BA-30; two in Remote Control Unit and two in Local Control Unit) connected in series with the microphone windings of the line transformer.
The ringing circuit consists of:
- Hand cranked 90 volts/20 Hz ringing generator/signal transmitting device.
- Bell and lamp/signal receiving devices.
- Signal switch to select audible or visual signal.

Ringing, sending and receiving devices are connected across the telephone line.

**Control Circuits**

**Remote Control Circuit**
C-433/GRC

Remote Control Circuit consists of:
- Control Voltage
- Selector Switch/three position which provides three functions:
  - **LEFT-HAND WRITE-IN POSITION** - battery connected across line/binding post L1 positive/L2 negative.
  - **MIDDLE WRITE-IN POSITION** - battery connected across line/binding post L1 negative/L2 positive.
  - **TEL** - battery disconnected from line.
Local Control circuit consists of:

- Four position Remote Switch.
- Three position Local Switch.
- Three relays 01, 02, and 03.

REMOTE SWITCH (SET 1, SET 2, or SET 1 and SET 2) connects relays 01, 02 and 03 across the line to respond to the particular control voltage polarity determined by the setting of the Remote Control SELECTOR switch. In the TEL ONLY position, the switch removes control of radio from remote operator and allows the local operator control.

LOCAL SWITCH - with Remote Switch (Local Control Unit) in TEL ONLY position, control of SET 1 or SET 2 is available to local operator.

Relays 01, 02, 03

01- Nonpolarized, nonlocking type; controls switching of microphone and headphone leads,

02- Polarized, with magnetic latch; controls switching ground return connection to receiver-transmitter control relays.

03- Polarized, with magnetic latch; controls switching power supply energizing lead for the radio set. (Refer to [FO-7].)

### 2-2. Repair Parts

Refer to TM 11-5820-489-34P.
Section II. TROUBLESHOOTING PROCEDURES

2-3. GENERAL INSTRUCTIONS

a. Maintenance personnel should conduct a visual inspection of the equipment before starting detailed troubleshooting steps. Many troubles can be discovered by looking over the equipment and noting an obviously damaged, dirty or corroded part, or defective wiring.

b. Maintenance personnel at the Direct Support level should take advantage of steps made at lower levels by:
   ● debriefing operator who discovered fault if possible or applicable.
   ● debriefing organizational personnel who attempted repair prior to receipt of equipment at the Direct Support facility.

c. The following troubleshooting chart can be used only if both components of Control Group AN/GRA-6 are available and installed properly. For installation procedures see [TM-11-5820-489-20]. If only one component of Control Group AN/GRA-6 is available at the direct support maintenance level proceed to the localized testing procedure starting in para. 2-4 and do short circuit checks, operational checks, voltage and resistance measurements to isolate faulty components.

d. Batteries must be installed if no other power source is provided.
Using the Troubleshooting Chart

<table>
<thead>
<tr>
<th>MALFUNCTION/SYMPTOM</th>

<tbody>
<tr>
<td>TEST PROCEDURE</td>
<td>INDICATION</td>
</tr>
<tr>
<td>1. REMOTE does not transmit visual signal.</td>
<td>LOCAL - Lamp (E3), Resistor (R1), Signal Selector Switch (S1) defective.</td>
</tr>
<tr>
<td></td>
<td>REMOTE - Transformer (T1) or Generator (G1) defective.</td>
</tr>
</tbody>
</table>

**Preliminary**
- REMOTE - Set SELECTOR to TEL.
- LOCAL - Set REMOTE switch to TEL ONLY, LOCAL switch to TEL, SIGNAL SELECTOR switch S1 to LAMP.

1. Crank REMOTE ringing generator. 
   - Ringing signal at HS of REMOTE.
   - Go to 2.
   - G1, T1 of REMOTE defective. (Refer to para 2-7.)
   - Change LAMP E3. (Refer to para 2-10.)
   - Repeat step 2. If NO, check S1, R1. (Refer to para 2-13.)

2. Crank REMOTE ringing generator. 
   - LAMP (E3) lights at LOCAL.

**Preliminary**
- REMOTE - Set SELECTOR to TEL. SIGNAL SELECTOR switch (S1) to LAMP
- LOCAL - Set REMOTE switch to TEL ONLY, LOCAL switch to TEL. Switch S1 to BELL.

1. Crank LOCAL ringing generator. 
   - Ringing signal at HS of LOCAL.
   - Go to 2.
   - G1, T1 of LOCAL defective. (Refer to para 2-8.)

**NOTE**
To remove unit from case, refer to paragraph 2-17.

1. Going from MALFUNCTION/SYMPTOM column to PROBABLE CAUSE column will zero in on the problem area.
2. WARNINGS, CAUTIONS and NOTES appear when applicable.
3. Flows logically, taking technician from most probable to least likely cause of malfunction.
4. Illustrated aids speed procedure and increase accuracy.
<table>

</tr>
<tr>
<td></td>
<td>REMOTE - Transformer (T1) or Generator (G1) defective.</td>
</tr>
</tbody>
</table>

Preliminary

REMOTE - Set SELECTOR to TEL.

LOCAL - Set REMOTE switch to TEL ONLY, LOCAL switch to TEL, SIGNAL SELECTOR switch S1 to LAMP.

1. Crank REMOTE ringing generator. Ringing signal at HS of REMOTE. Go to 2. G1, T1 of REMOTE defective. (Refer to para 2-7)

2. Crank REMOTE ringing generator. LAMP (E3) lights at LOCAL. Repeat step 2 If NO, check S1, R1. (Refer to para 2-13)

(2) LOCAL does not transmit visual signal.

REMOTE - Lamp (E3) Resistor (R1), Signal Selector Switch (S1), Transformer (T1) defective.

LOCAL - Transformer (T1) or Generator (G1) defective.

Preliminary

REMOTE - Set SELECTOR to TEL, SIGNAL SELECTOR switch (S1) to LAMP.

LOCAL - Set REMOTE switch to TEL ONLY, LOCAL switch to TEL, Switch S1 to BELL.

1. Crank LOCAL ringing generator. Ringing signal at HS of LOCAL. Go to 2. G1, T1 of LOCAL defective. (Refer to para 2-8)
<table>

2-4. SHORT CIRCUIT CHECKS - REMOTE CONTROL UNIT

Before proceeding to isolate faults within any component, key circuits should be checked for shorts.

**Preliminary Test Setup**

- Remove outer case cover releasing two snap catches (refer to para 2-17).
- Remove dry cell batteries (refer to para 2-17).
- Disconnect AUDIO accessories.
- Use Multimeter TS-352B/U.

**CAUTION**

Do not install batteries in this unit until any faults found in the following tests have been repaired.

**NOTE**

If an incorrect reading is obtained during initial short circuit checks, visually check wires, lugs, and parts involved and repair as needed, before proceeding to troubleshooting procedures.

Pin locations:
- J1
- J2
- P1 & P2
2-6. SHORT CIRCUIT CHECKS - INTERCONNECTING BOX J-654/G

- Disconnect plug connector U-77/U from REMOTE CONTROL UNIT AUDIO connector.
- Remove HS and LOUDSPEAKER from receptacle connectors U-79/U.
- Use Multimeter TS-352B/U.
- Use the following illustrations to locate test points.

- Measure continuity between letters of the same designation on receptacle connectors U-79/U and plug connector U-77/U. Reading should be zero.
- Measure continuity between pin A of connector U-77/U and all other pins. Reading should be infinity.
- Pins J, K, and L are not connected.
2-7. OPERATIONAL CHECKS FOR REMOTE CONTROL UNIT

It is necessary to use a HS known to be in good operating condition to properly conduct the following operational checks. Refer to TM 11-5820-489-20.

Test Setup

- Remove outer case cover by loosening two thumbscrews (refer to para 2-17).
- Install batteries (refer to para 2-20).
- Connect good HS to AUDIO connector.
- Set SELECTOR switch to TEL position.
- Set SIGNAL SELECTOR switch to BELL position.
- Use the following illustrations to locate test points.
### OPERATIONAL CHECKS

<table>
<thead>
<tr>
<th>TEST PROCEDURE</th>

<td></td>
</tr>
<tr>
<td>2. Connect a jumper between binding post L1 and terminal #2 of Signal Selector switch and crank generator handle.</td>
<td>Lamp lights</td>
<td>Go to 3. Replace Lamp. (Refer to para 2-19)</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>Repeat step 2. If NO, remove jumper and check resistance of transformer or capacitor. (Refer to para 2-15)</td>
<td></td>
</tr>
<tr>
<td>3. Move jumper from terminal #2 to #3 of switch and crank generator handle.</td>
<td>Bell rings</td>
<td>Remove jumper and Go to (2). Replace BELL. (Refer to para 2-19)</td>
<td></td>
</tr>
</tbody>
</table>

### (2) SPEECH CHECKS

**Preliminary**
Connect headphones with wire terminals at the end between binding posts.

Press push-to-talk switch on HS and talk into microphone.
Speech heard in headphones.
Check resistance of transformer. (Refer to para 2-15)
2-8. OPERATIONAL CHECKS FOR LOCAL CONTROL UNIT

It is necessary to use a HS known to be in good operating condition to properly conduct the following operational checks. Refer to TM 11-5820-489-20.

Test Setup

- Remove outer case cover by loosening two thumb screws (refer to para 2-17).
- Install batteries (refer to para 2-20).
- Connect good HS to AUDIO connector.
- Set SIGNAL SELECTOR switch to BELL position.
- Set REMOTE SELECTOR switch to TEL ONLY.
- Set LOCAL SELECTOR switch to TEL position.
- Use the following illustrations to locate test points.
### OPERATIONAL CHECKS

2-9. VOLTAGE MEASUREMENTS FOR REMOTE CONTROL UNIT

Test Setup

It is necessary to use a HS known to be in good operating condition to properly conduct the following voltage measurements. Refer to TM 11-5820-489-20.

- Remove outer case cover releasing two snap catches (refer to para 2-17).
- Install batteries (refer to para 2-20).
- Connect good HS to AUDIO connector.
- Set SELECTOR switch to LH write-in position.
- Use Multi meter TS-352B/U.
### VOLTAGE CHECK

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

4. Connect TS-352B/U between L2 and terminal 2 of generator. Connect a jumper between H and F of J1. | 30 to 45 Vdc L2-positive G1-2-negative | Go to 5. | Replace C1. (Refer to para 2-19) |

5. Connect TS-352B/U between L2 and terminal 3 of generator. | 30 to 45 Vdc L2-positive G1-3-negative | Go to 6. | Replace generator. (Refer to para 2-19) |

6. Connect TS-352B/U between L1 and L2. | 30 to 45 Vdc L2-positive L1-negative | | Replace transformer. (Refer to para 2-19) |

### NOTE
Remove jumper from terminals H and F of J1.
2-10. VOLTAGE MEASUREMENTS FOR LOCAL CONTROL UNIT

Test Setup

- Remove outer case cover by loosening two thumbscrews (refer to para 2-17).
- Install batteries (refer to para 2-20).
- Set LOCAL switch to TEL position.
- Use Multimeter TS-352B/U.
- Use the following illustrations to locate test points.

<table>
<thead>
<tr>
<th>VOLTAGE MEASUREMENTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>TEST PROCEDURE</td>
</tr>
<tr>

<td></td>
</tr>
</tbody>
</table>
2-11. REMOTE UNIT GENERATOR G-25/PT OR G-42A/PT CONTINUITY AND VOLTAGE CHECKS

Test Setup

- Remove outer case cover releasing two snap catches (refer to para 2-17).
- Set SELECTOR switch to TEL position.
- Set SIGNAL SELECTOR switch to BELL position.
- Use Multi meter TS-352B/U.
- Position unit so that rear and numbered terminals of generator are visible.
GENERATOR

<table>
<thead>
<tr>
<th>TEST PROCEDURE</th>
<th>INDICATION</th>
<th>YES</th>
<th>NO</th>

<td></td>
<td></td>
</tr>
<tr>
<td>1. Connect TS-352B/U between terminal 2 and 3 of generator.</td>
<td>Zero</td>
<td>Go to 2.</td>
<td>Replace generator. (Refer to para 2-19)</td>
</tr>
<tr>
<td>2. Crank generator.</td>
<td>Infinity</td>
<td>Go to (2).</td>
<td>Replace generator. (Refer to para 2-19)</td>
</tr>
</tbody>
</table>

(2) VOLTAGE CHECK

Connect a jumper between L1 and terminal 3 of the SIGNAL SELECTOR switch. Connect TS-352B/U between terminals 1 and 3 of the generator and crank generator handle.

Bell rings. Remove jumper. Replace generator. (Refer to para 2-19)

50 Vac reading.

NOTE

A generator producing 45 volts can be tolerated in service.
2-12. LOCAL UNIT GENERATOR G-25/PT OR G-42A/PT CONTINUITY

Test Setup

- Remove outer case cover by loosening two thumbscrews (refer to para 2-17).
- Set LOCAL switch to TEL position.
- Set REMOTE switch to TEL ONLY.
- Set SIGNAL SELECTOR switch to BELL position.
- Use Multi meter TS-352B/U.
- Position unit so that rear of generator and terminals are visible.
<table>
<thead>
<tr>

Section III. MAINTENANCE INSTRUCTIONS

This section will describe the following procedures for Control Group AN/GRA-6:

- Disassembly.
- Cleaning.
- Repair and replacement of parts identified as defective during Troubleshooting procedure.
- Reassembly.

After repairs or replacement have been made to components of Control Group AN/GRA-6 it should be ready for return to service. To verify its condition conduct the operational checks described in TM 11-5820-489-20.

2-17. DISASSEMBLY

**CAUTION**

Always read over and be sure you understand the instructions before attempting disassembly. Use the following illustrations to locate parts and subassemblies of the unit to be disassembled. Careful removal of parts is important to avoid damage to the equipment. Small parts such as screws and washers should be stored in small containers and marked to aid in reassembly.

Remote Control C-433/GRC

- Use these illustrations for disassembly.

a. **Outer Case** - To remove outer case, loosen the two snap catches on the side of the case and slide the unit out of the case.

   ![Illustration of Outer Case](image)

b. **Batteries** - Remove the battery compartment cover and batteries in the following manner:
   - Place Remote Control with the panel down on a table with the left side of the unit facing away from you.
   - Grasp the unit with both hands so that your thumbs rest on the two holes in the battery cover.
   - Place your fingers on the side of the chassis where the smaller dry cell batteries (BT1 and BT2) are visible to prevent them from slipping.
   - Press down on the cover and slide it back enough to allow the cover to pop up slightly.
   - Now slide the cover forward until it is released.
   - Remove the cover.
   - Remove the small dry cell batteries BT1 and BT2.
   - Remove battery connector plug P1 and remove BT3.
c. Call Light - Remove the call light holder in the following manner:

- Grasp the call light socket cap and pull it straight back out of the panel.
- Be careful not to break any wires or damage parts.

**CAUTION**

Be careful when removing the panel from the chassis to avoid damage to the connecting cable.

d. Panel - The panel should be removed only when it is necessary to repair a part on the panel. Remove the panel in the following manner:

- Locate the four machine screws, one at each corner of the chassis, which hold the panel in place.
- Remove these four screws and save for reassembly.
- Pull the panel gently away from the chassis frame.
Local Control

- Use these illustrations for disassembly.

a. Outer Case - Remove the outer case in the following manner:

- Remove the cap covering connector J2 at the rear of the unit.

- Press down the snap latch at the top rear of the unit and open the cable compartment cover.

- Mount the J2 cover cap on the brackets inside the cable compartment cover.
● Release the two thumbscrews on the front panel to disengage the panel from the outer case.

● Place Local Control panel down, on a table and lift off the cover.
● Feed the cables and the cable connectors through the hole in the cable compartment.

NOTE

It may be difficult sliding connector J2 through the hole in the case. This usually happens when the two O-rings on connector J2 are swollen. Apply a small amount of vaseline or PC-4 grease to the O-rings. Connector J2 should slide through the hole easily.

b. Batteries - Remove the battery compartment cover and batteries in the following manner:

● Locate the plastic battery container in the battery compartment.
● Press the snap catch which holds the battery container cover in place and remove the cover.
● Remove dry cell batteries BT1 and BT2.

c. Call Light - Remove the call light holder in the following manner:

● Grasp the call light socket and pull it straight back out of the panel.
● Be careful not to break any wires or damage parts.
CAUTION

Be careful when removing the panel from the chassis to avoid damage to the connecting cable.

d. Panel - The panel should be removed only when it is necessary to repair a part on the panel. Remove the panel in the following manner:

- Locate the four machine screws, one at each corner of the chassis, which hold the panel in place.
- Remove these four screws and save for reassembly.
- Pull the panel gently away from the chassis frame.

Visual Inspection

With Remote Control or Local Control disassembled it is simple to inspect all parts and wiring for any abnormal conditions. The causes of any abnormal conditions should be isolated and repaired. Specific repair and replacement procedures are covered in para 2-19. Now conduct the following visual checks:

- Inspect all parts for rust, corrosion, dirt, breakage or other damage.
- Inspect wiring for loose connections and frayed or burnt insulation.
- Inspect mounting hardware for mechanical defect, i.e., stripped threads, etc.
- Inspect transformer T1, ringing generator and switches for loose or broken lugs.
- Inspect all mounting hardware for looseness or defects.
- Inspect all battery contacts (flat and spring type) within the battery compartment and battery compartment cover for corrosion or broken, loose or damaged springs or contacts.
- Inspect the plug-in socket of BT3 for defects.
- Inspect battery plug P1 for pin or wire damage.

2-18. CLEANING

Dirt and corrosion interfere with electrical continuity and mechanical operation of equipment. All parts of the panel and chassis should be cleaned carefully. Use a lint-free cloth and dampen if necessary for most cleaning tasks. Always use a dry, lint-free cloth to wipe off the part or area that was cleaned.

Only use a cleaning solvent when absolutely necessary. Make sure that the cleaning compound is approved and that the following warnings are followed:

WARNING

Adequate ventilation should be provided while using TRICHLOROTRIFLUOROETHANE. Prolonged breathing of vapor should be avoided. The solvent should not be used near heat or open flame; the products of decomposition are toxic and irritating. Since TRICHLOROTRIFLUOROETHANE dissolves natural oils, prolonged contact with skin should be avoided. When necessary, use gloves which the solvent cannot penetrate. If the solvent is taken internally, consult a physician immediately.
2-19. REPLACEMENT OF PARTS

Replacement of parts or subassemblies for Control Group AN/GRA-6 should be based on one or more of the following:

- Visual inspection reveals an obvious defect.
- Operation checks reveal a possible fault.
- Troubleshooting procedure reveals a possible fault.
- Test results reveal a fault.

**CAUTION**

Perform operational checks after every repair or replacement. Refer to paragraph 2-7 or 2-8.

**NOTE**

When operation checks or troubleshooting procedures reveal a possible fault, an actual voltage or resistance measurement test should be performed to verify the fault. Make sure that all the TEST SETUP steps are followed and the correct points of measurement are used. Except for an obviously broken, burnt or corroded part, no part or subassembly should be replaced without using every possible means to verify the fault.

**NOTE**

When repairing or replacing parts or subassemblies of Control Group AN/GRA-6 remember the following:

- Tag leads or wires to ensure correct rewiring.
- Clean the unit thoroughly to remove all solder drops, metal chips or foreign matter after completing repairs or replacement.
- Support the unit or subassembly properly to avoid straining or breaking wire connections between parts or subassemblies.
- Use a heat sink when soldering and unsoldering.

**Remote Control C-433/GRC**

Replacement of many parts in Remote Control requires disassembly of the unit as described in para 2-17. Disassembly will divide the unit into three subassemblies:

- Panel Group
- Chassis Group
- Battery Cover Group.
**Panel Group**
**Disassembly Not Required/Outer Cover Removed**

**a. Luggage Catch/D-Ring.** The luggage catch also serves as a mounting point for the D-Ring.
- Remove the four screws mounting the luggage catch to panel.
- Remove luggage catch and D-ring.
- Install replacement luggage catch and/or D-ring using four mounting screws.
- Tighten four mounting screws.

**b. Selector Switch Marker Disc**
- If marker disc is broken remove any pieces still mounted on the panel.
- Clean out the mounting area on the panel.
- Install the replacement disc using a suitable glue.

**c. Call Light Socket**
- Grasp the indicator light and pull it straight back out of the panel socket and remove bulb.
- Unsolder and tag the wires from the back of the call light socket.
- Solder the wires to the replacement call light socket.
- Carefully replace the call light socket.
d. Binding Posts (Includes Insulator and Extruded Washers)

- Locate the binding post at the rear of the panel and unsolder the wire from the stud. Tag the wire.
- Remove the nut which holds the binding post in place. It is at the rear of the binding post.
- Pull the binding post out from the front of the panel and save the extruded washer and insulator washer unless they are to be replaced. Note the order of the washers.
- Install the replacement binding post, extruded washer and insulator washer into the panel from the front.
- Install the binding post attaching nut to the binding post from the rear of the panel. Do not strip the threads.
- Solder the tagged wire to the binding post stud.

Disassembly Required

Replacement of the following parts in the panel group requires disassembly. See paragraph 2-9 for disassembly procedures for Remote Control.

e. Gasket

- Remove the gasket from the groove on the rear of the panel.
- Clean out the groove, removing all old gasket material and dirt.
- Apply DC-4 grease or an approved sealing compound to the new gasket.
- Install the new gasket in the groove, be sure it fits properly.
f. Audio Connector J1

- Insert a spanner wrench in the notches of the nut which secures J1 to the front of the panel.
- Turn the wrench counterclockwise until the nut is completely loose.
- Remove the nut and lock washer.
- Unsolder and tag all wires.
- Remove J1 from the rear of the panel.

- Make sure the replacement J1 has a rubber gasket.
- Resolder the wires to the new J1.
- Remove all solder drops.
- Insert the replacement J1 in the panel from the rear.
- Attach the lock washer and nut onto the threaded portion of J1. Do not strip the threads.
- Tighten the nut finger tight and then tighten securely with the spanner wrench.

g. Resistor R2

- Resistor R2 is attached to the rear of SELECTOR switch S2.
- Carefully unsolder R2 and tag the wire which is attached with R2 to S2.
- Solder the replacement R2 to the rear of S2 and the previously tagged wire.
h. SELECTOR Switch S2

- Unsolder and tag all wires from the switch.

- Remove the switch knob retaining screw and knob from the front of the panel.
- Remove the castellated retaining nut from the front of the panel using a spanner wrench.

- Remove the switch from the rear of the panel.
- Insert the replacement switch into the panel from the rear. Make sure the key on the switch fits into the slot in the panel.
- Handle the switch carefully to avoid breaking the wafer.
- Restore the castellated retaining nut using a spanner wrench and tighten. Do not strip the threads.
- Restore the switch knob and retaining screw and tighten.
- Check the operation of the switch in each operating position.
- Resolder the wires to the switch.
- Remove all solder drops.
i. Generator

- The generator is replaced as a unit assembly.
- Remove the screw and lock washer which hold the generator crank handle.
- Slide the crank off the shaft.

- Disconnect the wires attached to the rear of the generator and tag.
- Use a spanner wrench and remove the nut which holds the generator to the panel.
- Pull the generator out from the rear of the panel.
- Install the replacement generator into the panel.
- Restore the nut which holds the generator to the panel and tighten it. Do not strip the threads.
- Reattach the wires to the rear of the generator.
- Install the generator crank handle on the shaft.
- Install the lock washer and screw which hold the crank handle and tighten.

Chassis Group

Replacement of most parts in the chassis group can be made without disassembly. Remove the battery cover before proceeding.

a. Battery Connector Plug P1

- Heat pins 1 and 3 with soldering iron to remove wires and tag them.
- Solder the wires to the replacement battery plug.
b. Telephone Ringer (Bell)

- Remove the two machine screws which mount the rinser to the chassis.
- Lift the ringer out of the compartment being careful not to strain or break wires or connections.

- At the terminal board unsolder the wires connecting to the ringer.
- Resolder the wires from the replacement bell to the terminal board.
- Restore the bell in its compartment in the chassis.
- Install the two mounting screws and tighten.

c. Transformer T1

- Remove the two machine screws which mount the transformer to the chassis.

- Carefully lift the transformer straight-up out of the chassis. Be careful not to strain or break any wires or connections.

- Unsolder and tag the wires connected to the transformer.
- Resolder the wires to the replacement transformer.
- Put the transformer back into its place in the chassis.
- Install the two machine screws mounting the transformer to the chassis and tighten.
d. Capacitor C1

- Remove the two machine screws, lock washers and nuts mounting the capacitor to the chassis.

- Carefully lift the capacitor out of the chassis being careful not to strain or break any wires or connections.
- Unsolder and tag the wires connected to the capacitor.
- Resolder the wires to the replacement capacitor.
- Put the capacitor into its compartment in the chassis.
- Install the two mounting screws and tighten.

e. Toggle Switch S1

- Use a wrench to remove the nut which mounts the switch to its mounting plate.
- Pull the switch out of the mounting plate.
- Unsolder and tag the wires connected to the switch.
Resolder the wires to the replacement switch.
Restore the switch to the mounting plate.
Install the mounting nut and tighten.

f. Battery Contacts. If either contact of the battery contact assembly is damaged or corroded replace the entire assembly in the following manner:

- Drill out the four rivets which mount the contact assembly to the chassis.

    ![Diagram of battery contacts]

    **NOTE**
    If the contact assembly has been replaced before, it may be attached with machine bolts, lock washers, and nuts instead of rivets.

- Lift the contact assembly out of its compartment being careful not to break any wires or connections.
- Unsolder the wires connected to the contact assembly.
- Resolder the wires to the replacement contact assembly.

    ![Diagram of contact assembly]

- Install the contact assembly in its proper location in the chassis.
- Fasten the contact assembly to the chassis using machine bolts, lock washers and nuts.

    **NOTE**
    Clean corroded contacts before replacing the contact assembly.
g. Resistor R1

- Resistor R1 is located on two standoffs close to the telephone ringer and transformer T1.
- Carefully unsolder R1.
- Solder the replacement R1 in position.

a. Battery Contacts

- Drill out the four rivets which mount the contact assembly to the battery cover.
- Lift the assembly off the cover.
- Put the replacement contact assembly on the cover.
- Using machine bolts, lock washers and nuts, mount the contact assembly to the cover and tighten.

b. Spring Holder (Battery)

- Drill and remove the rivets or remove the machine bolts and nuts which mount the spring holder to the battery cover.
- Remove the spring holder.
- Install the replacement spring holder.
- Restore the nuts and tighten.

Local Control C-434/GRC

Replacement of many parts in Local Control requires disassembly of the unit as described in paragraph 2-17. Disassembly will divide the unit into these subassemblies:

- Panel Group
- Chassis Group
- Cable Compartment Group

The part to be repaired or replaced will be located in one of these three subassemblies of Local Control. Use the following illustrations to locate the part and proceed to the following subparagraph dealing with repair or replacement of parts in that subassembly.
Panel Group
Disassembly Not Required

a. Thumbscrew

- Remove outer case.
- Turn thumbscrew to a horizontal position.
- Remove the two machine screws which secure thumbscrew to panel.
- Pull the thumbscrew assembly away from the panel.
- Install the replacement thumbscrew assembly on the panel.
- Install the two mounting screws and tighten.

b. Indicator Light

- Remove battery cover for BT1 and BT2.
- Remove BT1 and BT2.
- Grasp the indicator light and pull it straight back out of the panel socket.
- Be careful not to break any wires or damage any parts.
- Unsolder and tag the wires from the back of the indicator light.
- Solder the wires to the replacement indicator lamp.
- Carefully replace the indicator light in the panel socket.
- Install BT1 and BT2.
- Install the battery cover.
Disassembly Required

Replacement of the following parts in the panel group requires disassembly. See paragraph [2-17] for disassembly procedures for Local Control.

c. Gasket

- Remove the gasket from the groove around the back of the panel.
- Clean out the groove, removing all old gasket material and dirt.
- Apply DC-4 grease or an approved sealing compound to the new gasket.
- Install the new gasket in the groove ensuring proper fit.

d. Binding Post (Includes Insulator and Extruded Washers)

- Unsolder and tag the wire from the rear of the binding post.
- Remove the nut which holds the binding post in place at the rear of the panel.
- Pull the binding post out from the front of the panel and save the extruded washer and insulator washer unless they are to be replaced. Note the order of the washers.
- Install the replacement binding post, extruded washer and insulator washer in the panel from the front.
- Fasten the binding post attaching nut to the binding post from the rear of the panel. Do not strip the threads.
- Solder the tagged wire to the binding post stud.
e. Audio Connector J1

- Insert a spanner wrench in the notches of the nut which secures J1 to the panel.
- Turn the wrench counterclockwise until the nut is completely loose.
- Remove the nut and lock washer.
- Unsolder and tag all wires.
- Remove J1 from the rear of the panel.
- Make sure the replacement J1 has a rubber gasket.
- Resolder the wires to the new J1.
- Remove all solder drops.
- Insert the replacement J1 into the panel from the rear.
- Attach the lock washer and nut onto the threaded portion of J1 from the front of the panel.
- Tighten the nut finger tight and then tighten securely with the spanner wrench.

f. Rotary Switches S2 and S3

For replacement of REMOTE Switch (S2) and LOCAL Switch (S3) use the following procedure:

- Unsolder and tag all wires from the switch.
- Remove the switch knob retaining screw and knob from the front of the panel.

- Remove the castellated retaining nut from the front of the panel using a spanner wrench.
- Remove the switch from the rear of the panel.
- Insert the replacement switch into the panel from the rear. Make sure the key on the switch fits into the slot in the panel.
- Handle the switch carefully to avoid damaging the wafer.
- Replace the castellated retaining nut using a spanner wrench.
- Replace the knob and retaining screw and tighten.
- Check the operation of the switch in each operating position.
- Resolder the wires to the switch and remove tags.
- Remove all solder drops.

**g. Generator**

- The generator is replaced as a unit assembly.
- Remove the screw and lock washer which hold the generator crank to the front panel.
- Slide the crank off the shaft.
- Tag and disconnect the wires attached to the rear of the generator.
- Use a spanner wrench and remove the nut which holds the generator to the panel.
- Pull the generator out from the rear of the panel.
- Install the replacement generator into the panel.
● Restore the nut which holds the generator to the panel and tighten it. Do not strip the threads.
● Reattach the wires to rear of the generator and remove tags.
● Install the generator crank handle on the shaft.
● Install the lock washer and screw which hold the crank to the front panel and tighten.

Chassis Group
Disassembly Not Required

a. Cable Assembly

● Remove two machine screws which secure the cover over the packing nuts.

● Remove the cover.
● Use a wrench and loosen the packing nuts which fasten the cable assembly to the mounting points on the chassis.

● Remove battery cover, BT1, BT2 and battery holder.
● Remove transformer T1 mounting screws.
● Pull T1 up and out of the chassis being careful not to break any wires or connections. (See steps in d. below)
● Remove two machine screws mounting terminals board to chassis.
● Pull terminal board out of chassis carefully.
● Tilt terminal board for access, unsolder and tag all connections from cable assembly.
● Remove the cable assembly, packing nuts and washers.
Install replacement cable assembly.
Solder all wires and connections to terminal board from replacement cable assembly.
Install terminal board in chassis with two mounting screws and tighten.
Replace T1 and mounting screws in chassis and tighten.
Replace battery holder with four mounting screws.
Replace BT1 and BT2 if equipment will be used or tested in the near future.
Replace battery cover.
Replace the packing nuts, washers and replacement cable assembly to the mounting points on the chassis.
  Handtighten the packing nuts. Do not strip the threads.
  Use a wrench and tighten the packing nuts.
  Replace the cover over the packing nuts.
  Replace the two mounting screws and tighten.
b. Gaskets (O-rings)

- Remove the O-ring from the groove around receptacle connector J2.
- Clean out the groove, removing all old gasket material and dirt.
- Apply DC-4 grease or an approved sealing compound to the new O-ring.
- Install the new O-ring in the groove ensuring proper fit.

c. Resistor R1

- Resistor R1 is attached to the terminal board located near the telephone ringer and transformer T1.
- Carefully unsolder R1 from the terminal board and tag the leads.

NOTE

If difficulty is encountered unsoldering R1 remove the two machine screws mounting transformer T1 and pull T1 up out of the chassis.

- Solder the replacement R1 to the terminal board.
- If T1 was removed install it in the chassis.
- Restore the two mounting screws and tighten.
d. Transformer T1

- Remove battery cover and BT1 and BT2.
- Remove the four battery holder mounting screws.
- Remove the battery holder.

- Remove the two T1 mounting screws.
- Lift T1 out of the chassis being careful not to break any wires or connections.
- Unsolder and tag the wires connected to T1.
- Resolder the wires to the replacement T1.
- Replace T1 in the chassis.
- Install the two T1 mounting screws and tighten.
- Install BT1 and BT2 if equipment will be used or tested in the near future.
- Replace battery cover.
e. Telephone Ringer (Bell)

- Remove battery cover, BT1, BT2.
- Remove transformer T1 mounting screws.
- Move T1 away from the ringer.
- Remove the two ringer mounting screws.
- Pull ringer out of chassis carefully.

- Unsolder and tag the wires.
- Solder the wires to replacement ringer.
- Replace ringer in chassis.
- Install two mounting screws and tighten.
- Replace T1 and two mounting screws and tighten.
- Install BT1 and BT2 if equipment will be used or tested in the near future.
- Install battery cover.

f. Terminal Board

- Remove battery cover, BT1, BT2 and battery holder.
- Remove transformer T1 mounting screws.
- Pull T1 up and out of the chassis being careful not to break any wires or connections. (See steps in d. on page 2-70.)
- Remove two machine screws mounting terminal board to chassis.
Pull terminal board out of chassis carefully.

Tilt terminal board for access and unsolder and tag all wires and connections.

Solder all wires and connections to replacement terminal board and remove tags.

Install terminal board in chassis with two mounting screws and tighten.

Replace T1 and mounting screws in chassis and tighten.

Replace battery holder with four mounting screws.

Replace BT1 and BT2 if equipment will be used or tested in the near future.

Replace battery cover.

g. Capacitors C1 and C2

Procedure is identical for replacement of capacitor C1 and C2.

Remove the machine screws which mount the capacitor to the chassis.

Remove the capacitor from its compartment.

Unsolder and tag the wires attached to the capacitor terminals.

Resolder the wires to the replacement capacitor.

Install the replacement capacitor in the compartment and remove tags.

Install the machine screws and tighten.
h. Toggle Switch S1
- Unsolder and tag the wires attached to the toggle switch.
- With a wrench, remove the nut which mounts the switch to its mounting plate.
- Pull the switch out of the mounting plate.
- Install the replacement switch on the mounting plate.
- Restore the mounting nut and tighten.
- Resolder the wires to the replacement switch and remove tags.

i. Battery Contacts

Cover - If either or both of the battery contacts on the battery cover are badly corroded or damaged replace the entire cover.

Chassis - If either or both of the battery contacts on the chassis mounted contact strip are badly corroded or damaged replace the entire strip in the following manner:
- Remove battery cover, BT1, BT2 and battery holder. See steps in 4. above
- Drill out the four rivets mounting the contact strip to the chassis.
- Remove the contact strip.
- Unsolder the wires connected to the contact strip.
- Remove all metal chips and solder drops from the chassis.
- Solder the wires to the replacement contact strip.
j. Relays 01, 02, 03

- Loosen and remove the two screws which hold the relay compartment cover in place.
- Remove the cover.

**CAUTION**

Relay pins are easily damaged. Use extreme care when removing relays.

- Carefully pull the relay to be replaced out of the socket. Rock relay back and forth if necessary.
- Install the replacement relay.
- Install the relay compartment cover.
- Tighten the mounting screws.

k. Relay Tube Sockets

- Remove relay cover and relays. See steps in 10. above.
- Remove battery cover, BT1, BT2 and battery holder. See steps in d. above.
- Drill out rivets which mount the relay socket to be replaced.
Pull the socket and turn it to gain access to the solder points.

Unsolder and tag the wires attached to the socket.
Solder the wires to the replacement socket and remove tags.
Replace the socket in the chassis recess.
Using bolts, lock washers and nuts mount the relay socket to the chassis.
Replace battery holder, BT1, BT2 and battery cover.
Replace relays 01, 02, 03 and relay cover.

Disassembly Required

I. Receptacle Connector J2

- Remove relay cover and relays. See step j. on page 2-74
- Remove bolts, lock washers and nuts (4 ea) which mount J2 to chassis.

- Remove flange. Do not break any wires or connections.
- Remove five machine screws which secure the relay subassembly to the chassis.
- Move the relay subassembly away from J2 within the chassis.
- Remove O-rings.
- Pull the flange and J2 assembly in through the hole in the chassis.
● Unsolder and tag the wires attached to J2.
● Solder wires to replacement J2 and remove tags.
● Insert J2 back out through the hole in the chassis.
● Install the flange and align it with the holes in the chassis and J2.
● Install bolts, lock washers and nuts (4 ea) through the holes securing J2 to the chassis.
● Tighten four bolts.
● Replace relay subassembly using five machine screws and tighten.
● Replace panel.
● Replace relays 01, 02, 03 and relay cover.

2-20. REASSEMBLY

If disassembly was necessary to repair either component of Control Group AN/ GRA-6 follow these instructions for reassembly:

Remote Control

a. Call Light Socket

● Install the call light socket in the panel before installing the panel assembly to the chassis assembly.
● Install the call light socket into its mounting hole on the panel assembly.

b. Panel

● Install the panel on the chassis lining up the holes on the panel and chassis.
● Make sure that no wires will be pinched between the panel and chassis.
● Install the four machine screws which mount the panel to the chassis and tighten.

c. Batteries

● If the equipment is to be used again soon, install batteries BT1, BT2 and BT3.

d. Battery Compartment Cover

● Place Remote Control with the panel down and the left side of the unit facing away from you.
● Place the compartment cover on the back of the unit with the projections aiming towards you and lined up with the chassis bracket angles.
● Depress the cover slightly and slide the cover projections under the chassis bracket angles.
● Depress the other end of the cover and slide it under the tab on the chassis securing the cover.

e. Outer Case

● Slide the unit into the outer case.
● Fasten the snap catches and secure the outer case to the unit.

3-2. REPAIR PARTS
Refer to TM 11-5820-489-34P.

Section II. TROUBLESHOOTING PROCEDURES

3-3. GENERAL Instructions
Use the troubleshooting procedures covered in Chapter 2 of this manual to isolate and correct troubles in Control Group AN/GRA-6.
Section III. TESTING PROCEDURE

3-4. GENERAL INSTRUCTIONS

The following testing procedures are necessary to verify the performance standards for Control Group AN/GRA-6 for general support level maintenance and overhaul as authorized by the Maintenance Allocation Chart. If a part, subassembly, component, etc., does not meet the performance standard, the fault should be isolated and corrected using the troubleshooting, disassemble and repair sections of Chapter 2 of this manual. The Source, Maintenance and Recoverability (SMR) code of the affected part should be determined by consulting TM 11-5820-489-34P.

3-5. PHYSICAL TESTS AND INSPECTION

Test Setup

- Disconnect all connections to Control Group AN/GRA-6.
- Controls may be in any position.
- Test applies to both C-433/GRC and C-434/GRC.
- No test equipment needed.

<table>
<thead>
<tr>
<th>TEST</th>
<th>INDICATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Check SELECTOR, REMOTE, LOCAL and BELL-LAMP switches for correct operation. Check Generator for proper operation. Check cable assemblies for cuts and breaks in insulation. Inspect all connectors, lamps, and cover plates for damage and missing parts. Inspect both components for physical damage such as dents, punctures, and bent areas. Inspect both components for condition of finish and panel markings.</td>
<td>All switches should operate freely without binding. Generator should crank without binding. Wires and cables should have no deep cuts in insulation. Connectors, lamps, and cover plates should not have missing parts or be damaged so as to prevent proper operation. There should be no physical damage serious enough to prevent proper operation. Surfaces originally painted should not show bare metal. Panel markings should be legible.</td>
</tr>
</tbody>
</table>

3-6. CONTROL CIRCUITS TEST

Test Equipment and Material

- Power Supply PP-4763( )/GRC
- Radio Set AN/GRC-106
- Multimeter TS-352( )/U
- Dummy Load, Electrical DA-75/U
- Handset H-33( )/PT
- Decade Resistors ZM-16( )/U (2)

Test Setup

- Install batteries in C-433/GRC and C-434/GRC.
- Use Multi meter TS-352( )/U when applicable.
- Hook up equipment as shown in illustration.

Interconnecting Box J-654/G  
Signaling and Interphone Test

**Test Setup**

- Install batteries in C-433/GRC and C-434/GRC.
- Use Multimeter TS-352( )/U.
- Connect all equipment as shown in the following illustration.
- Leave outer case cover off C-433/GRC and C-434/GRC.

APPENDIX A

REFERENCES

A-1. INTRODUCTION

Following is a list of all forms and technical manuals referenced in this manual.

- Quality Deficiency Report. Form SF 368
- Recommended Changes to Equipment Technical Manuals. DA Form 2028-2
- Recommended Changes to Publications and Blank Form. DA Form 2028

A-2. TECHNICAL MANUALS

- Direct Support and General Support Maintenance Repair Parts and Special Tools List (Including Depot Maintenance Repair Parts and Special Tools): Control Group AN/GRA-6. TM 11-5820-489-34P
- Organizational Maintenance Manual: Control Group AN/GRA-6. TM 11-5820-489-20
- Procedures for Destruction of Electronic Materiel to Prevent Enemy Use (Electronics Command). TM 750-244-2

A-3. MISCELLANEOUS PUBLICATIONS

- The Army Maintenance Management System (TAMMS). DA Pam 738-750
- Consolidated Index of Army Publications and Blank Forms. DA Pam 310-1
**APPENDIX B**

**EXPENDABLE SUPPLIES AND MATERIALS LIST**

**B-1. INTRODUCTION**

This appendix lists expendable supplies and materials you will need to operate and maintain AN/GRA-6. These items are authorized to you by CTA 50-970, Expendable Items.

**B-2. EXPLANATION OF COLUMNS**

a. **ITEM NO.** This number is referenced in the narrative instructions to identify the material (for example, "Use cleaning compound, Item 1, Appx B").

b. **LEVEL.** Shows the lowest level of maintenance that needs the listed item.

   C - Crew/Operator

c. **NATIONAL STOCK NUMBER.** Shows the National Stock Number assigned to each item and used to requisition that item.

d. **DESCRIPTION.** Shows the National Item Name and (if required) a short description to identify and locate the item. The last line for each item shows the Federal Supply Code for Manufacturers (FSCM) in parentheses, followed by the part number.

e. **UNIT OF MEASURE (U/M).** Shows the measure of the item needed to perform the actual operational/maintenance function. This measure is shown by a two-letter abbreviation (for example, EA, OZ, IN).

- Remote Control C-433/GRC: 2-27

*U.S. GOVERNMENT PRINTING OFFICE : 1993 0 - 342-421 (61902)
**IN THIS SPACE TELL WHAT IS WRONG AND WHAT SHOULD BE DONE ABOUT IT:**

Recommend that the installation antenna alignment procedure be changed throughout to specify a 2° IFF antenna lag rather than 1°.

**REASON:** Experience has shown that with only a 1° lag, the antenna servo system is too sensitive to wind gusting in excess of 25 knots, and has a tendency to rapidly accelerate and decelerate as it hunts, causing strain to the drive train. Hunting is minimized by adjusting the lag to 2° without degradation of operation.

Item 5, Function column. Change "2 db" to "3db."

**REASON:** The adjustment procedure for the TRANS POWER FAULT indicator calls for a 3 db (500 watts) adjustment to light the TRANS POWER FAULT indicator.

Add new step f.1 to read, "Replace cover plate removed in step e.1, above."

**REASON:** To replace the cover plate.

Zone C 3. On J1-2, change "+24 VDC to "+5 VDC."

**REASON:** This is the output line of the 5 VDC power supply. +24 VDC is the input voltage.
