***Introduction***

This manual provides the technical information necessary for servicing the FTM-3100R/E and FTM-3200DR/DE Transceiver. Servicing this equipment requires expertise in handling surface-mount chip components. Attempts by non-qualified persons to service this equipment may result in permanent damage not covered by the warranty, and may be illegal in some countries. Two PCB layout diagrams provided for each double-sided board in this transceiver. Each side of the board is referred to by the type of the majority of components installed on that side ("Side A" or "Side B"). In most cases one side has only chip components, and the other has either a mixture of both chip and leaded components (trimmers, coils, electrolytic capacitors, ICs, etc.), or leaded components only.

While we believe the information in this manual to be correct, YAESU assumes no liability for damage that may occur as a result of typographical or other errors that may be present. Your cooperation in pointing out any inconsistencies in the technical information would be appreciated.

## Introduction and Precautions

The FTM-3100R/E, FTM-3200DR/DE has been carefully aligned at the factory for performance across the specified amateur bands. Realignment should therefore not be necessary except in the event of a component failure. All component replacement and service should be performed only by an authorized YAESU representative, or the warranty policy may be voided.

The following procedures cover the sometimes critical and tedious adjustments that are not normally required once the transceiver has left the factory. However, if damage occurs and some parts are replaced, realignment may be required. If a sudden problem occurs during normal operation, it is likely due to component failure; realignment should not be done until after the faulty component has been replaced.

We recommend that servicing be performed only by authorized YAESU service technicians, who are experienced with the circuitry and fully equipped for repair and alignment. Therefore, if a fault is suspected, contact the dealer from whom the transceiver was purchased for instructions regarding repair. Authorized YAESU service technicians realign all circuits and make complete performance checks to ensure compliance with factory specifications after replacing any faulty components.

Those who do undertake any of the following alignments are cautioned to proceed at their own risk. Problems caused by unauthorized attempts at realignment are not covered by the warranty policy. Also, YAESU must reserve the right to change circuits and alignment procedures in the interest of improved performance, without notifying owners.

Under no circumstances should any alignment be attempted unless the normal function and operation of the transceiver are clearly understood, the cause of the malfunction has been clearly pinpointed and any faulty components replaced, and the need for realignment determined to be absolutely necessary.

### Important Notice

Do not adjust the alignment menus that are not mentioned in this manual.

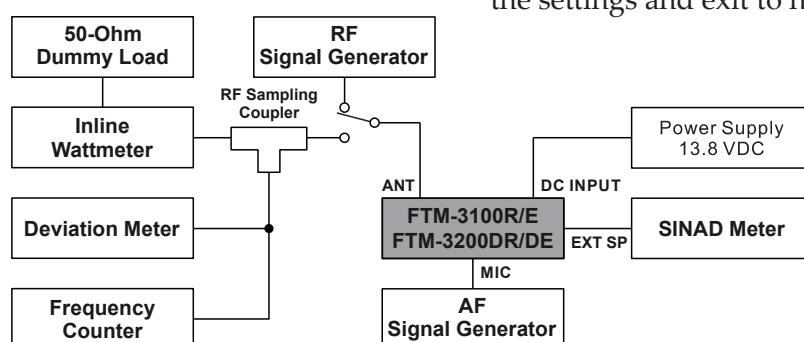

## Alignment Preparation & Precautions

A 100-W RF dummy load and in-line wattmeter must be connected to the main antenna jack in all procedures that call for transmission; alignment is not possible with an antenna. After completing one step, read the next step to see if the same test equipment is required. If not, remove the test equipment (except dummy load and wattmeter, if connected) before proceeding. Correct alignment requires the transceiver and test equipment be maintained at a constant ambient temperature between 68 °F ~ 86 °F (20 °C ~ 30 °C). When the transceiver is brought into the shop from hot or cold air, it should be allowed some time to come to room temperature before alignment. Whenever possible, alignments should be made with oscillator shields and circuit boards firmly affixed in place. Also, the test equipment must be thoroughly warmed up before beginning.

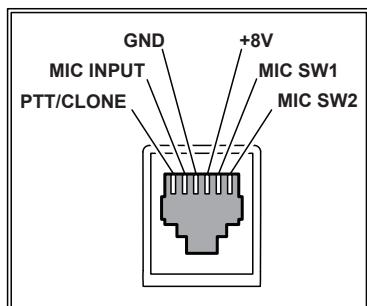

**Note:** Signal levels in dB referred to in the alignment procedure are based on 0 dB $\mu$ =0.5  $\mu$ V (closed circuit).

## Test Setup

Set up the test equipment as shown below for transceiver alignment. Maintain the supply voltage at 13.8V DC for all steps.

## Internal System Alignment Routine

This uses a programmed routine in the transceiver which simplifies many previously complex discrete component settings and adjustments with digitally-controlled settings via front panel buttons and LCD indications.

### Programming the alignment password

1. Set the transceiver to the Analog-mode.
2. Press and hold in the [**MHz(SETUP)**] key for one second, then rotate the **DIAL** knob to select "**OPEN MSG 20**" (FTM-3100R/E), "**OPEN MSG 27**" (FTM-3200DR/DE).
3. Press the [**MHz(SETUP)**] key, then rotate the **DIAL** knob to select "MESSAGE".
4. Press the [**TXPO**] (FTM-3100R/E), [**D/A(GM)**] (FTM-3100R/E) key momentarily to enable programming of the opening message. You will notice the first character entry's location blinking.
5. Rotate the **DIAL** knob to select the "A", then press the [**V/M(MW)**] key momentarily to save the "A" and move to the next character.
6. Repeat the previous step to complete the alignment password "AH052N".
7. When you have completed the password, press the [**TXPO**] (FTM-3100R/E), [**D/A(GM)**] (FTM-3100R/E) key momentarily, then press and hold in the [**MHz(SETUP)**] key for one second to save the settings and exit to normal operation.

## To enter the Alignment mode

1. Turn the transceiver off.
2. Press and hold in the [**SQL**] and [**TXPO**] (FTM-3100R/E), [**SQL(TXPO)**] and [**D/A(GM)**] (FTM-3200DR/DE) keys while powering the transceiver on. The transceiver will enter the adjustment mode, and the display will show the first alignment setting. Thereafter, the frequencies used during alignment will automatically be set without action by the technician.

In the alignment process, each adjustment is selected by rotating the **DIAL** knob. The alignment is performed by: pressing the [**V/M(MW)**] key injecting a signal of the required frequency and level; making the adjustment; and then pressing the [**V/M(MW)**] key again, to store the adjustment.

To exit the alignment routine, press the [**REV(DW)**] key.
